

Notice of Petition Deficiency

Deficiency identified

The clerk's office reviewed the petition tender received February 11, 2025 and found one curable defect: the package identifies the January 13 Board order but does not attach the required copy. The caption, parties, agency, challenged-order reference, respondent contact information, and certificate of service are otherwise sufficient for the limited purpose of issuing this notice. The clerk records the original receipt date and does not dismiss the matter.

A.R.M. must cure by filing the complete eight-page Board order with a notice that identifies this February 11 deficiency. The correction should not restate unrelated allegations, add evidence, or alter the order under review. This notice addresses filing form only. It expresses no view on statutory timing, jurisdiction, CAT eligibility, the scope of the agency record, or any motion that a party may later present.

Notice of Petition Deficiency

Cure due February 18

The missing order copy and a short cure notice must be received no later than February 18, 2025. The seven-day cure period excludes the February 11 trigger date and counts each following calendar day. Washington's Birthday on February 17 falls within the period but is not the last day; the seventh day is Tuesday, February 18, so no weekend-or-holiday extension changes the due date. Counsel must serve the institutional respondent and preserve the same caption, parties, agency, and challenged-order reference used in the initial tender.

A response that supplies the order and identifies this notice will cure the stated defect while preserving the February 11 receipt history. A different petition, an unrelated attachment, or a response from a different party will not answer the notice. Counsel may cure before February 18; the due date is an outside limit, not a direction to wait. Failure to cure may result in dismissal for failure to prosecute after the deadline passes, but dismissal requires a later court order and is not imposed by this notice itself.
