

Rule 16(b) Stipulation

Controlled stipulation text

The parties stipulate to correction of an omission from the record transmitted for review. To eliminate uncertainty about what is agreed, they adopt the following complete UTF-8 value, which has no terminal newline within the controlled value:

```
STIPULATION-16B|date=2025-03-03|docket=SYN-CA4-25-AG-4301|  
parties=ARM,DHS|agree=correct omission by restoring unchanged  
Agency Exhibit P-7 at agency record pages 33-50;file itemized  
corrected index;preserve initial transmission;exclude appellate  
proffer pages 1-8 from administrative record|authority=Fed. R.  
App. P. 16(b)|signatures=ARM-C-9,DHS-APP-4
```

The SHA-256 of that exact value is

b26f4d1618332a6e006839a09c4ab77319bde4f58c6d3e219da4fbcfbe1ce855.

The digest identifies the agreement's bytes; it does not authenticate any underlying merits assertion. The parties request an order implementing only the stated correction and exclusions.

Rule 16(b) Stipulation

Correction implementation

The records office will restore 04-arm-sworn-declaration.pdf, eighteen pages, at AR33–AR50. It will verify SHA-256 08e8294532c23fe9feb5962ca5b7780ae958178e6c8e2b4840d1ee28f3c5d212, compare the object with the April and September receipts, and confirm that no page or annotation differs from the admitted P-7 object. All later agency labels will remain unchanged.

The office will also file an itemized corrected index and certification covering the complete agency set. The February 18 transmission will remain in the record so the original gap and certification history are not erased. A second clerk will compare the admitted-exhibit rows, page continuity, file names, page counts, and digests before service. These steps correct the transmission only; they do not reopen evidence, change an agency ruling, or state how much weight P-7 should receive.

Rule 16(b) Stipulation

Exclusion, signatures, and reservations

The parties agree that T.R.'s February 20 declaration and February 24 proffer were not before the immigration judge or Board and will not receive AR labels. The proffer may remain on the appellate docket, subject to the court's separate order on supplementation, but it will not be inserted into the corrected administrative set. This exclusion does not resolve the declaration's truth or any procedure outside the pending petition.

Counsel signs using controls ARM-C-9 for A.R.M. and DHS-APP-4 for the institutional respondent on March 3, 2025. Each party reserves all merits arguments, including aggregation, acquiescence, standard of review, and remedy. The stipulation supplies no agreement about the ultimate disposition. It is complete only with all three pages, the controlled text, the two object digests, and the stated implementation limits.
