

**SYNTHETIC TRAINING RECORD — FICTIONAL PARTIES, PEOPLE,
AGENCIES, SYSTEMS, IDENTIFIERS, AND EVENTS — NOT A REAL
FILING OR CYBERSECURITY GUIDE**

Public Redacted Joint Appendix Excerpts and Index

Filed: May 4, 2026 **Synthetic docket:** SYN-CA4-26-CV-4106 **Submitted jointly by:** Tamsin Roe, Leo Marr, and Corin Pell

Index and Record Boundary

These excerpts collect the public portions of the lower-court material needed to decide the appeal. They do not replace the complete certified record. The corresponding controlled volume has the same number of pages and page subjects, but uses harmless inert labels at selected semantic positions. This public volume uses only approved fictional redaction notices.

The first group covers request DOE-FOIA-2024-OG-041, acknowledgment ACK-OG-0610, clarification CLR-OG-0621, release RLS-OG-001, administrative appeal DOE-APR-2024-OG-017, and final administrative decision FAD-OG-1007. The second covers SRCH-OG-2025-0804, primary and supplemental Vaughn summaries, and RLS-OG-002. The last group covers the parties' cross-motions, the district court's access and merits orders, final judgment, docket certification, and record transmittal.

The responsive universe remains twelve records and 200 source pages. Families total sixty decision-tree pages, fifty-four escalation-matrix pages, sixty-four coordination-appendix pages, and twenty-two governance pages. The selected excerpts contain no authentic cyber instruction, identifying channel, infrastructure fact, credential, incident, or personal address.

Public and Controlled Treatment

This public volume remains available on an ordinary docket load. Its controlled counterpart is limited to the selected semantic placements corresponding to the three paired briefs and the appendix excerpts. The controlled volume is not a substitute for this one and does not remove public text from view.

The interim arrangement follows the document-specific motion and certificate filed under Fourth Circuit Local Rule 25(c). It identifies each controlled counterpart separately, preserves an equal-page public version, limits eligible viewers to the panel, necessary court staff, and counsel of record Tamsin Roe, Leo Marr, and Corin Pell, and makes access revocable rather than permanent.

An ordinary public session does not resolve the controlled asset. An authorized open must match the specified path, size, digest, readability, page count, and exact resolved-pack closure before a leased snapshot appears. Revocation removes the controlled row and restores the public-only projection. This text states an authored policy for the synthetic exercise; it does not claim that an external court or software system implements those controls.

Request and Search Excerpts

Nila Quen requested final and superseded fictional Grid Sentinel playbooks and final governance instruments. The clarification excluded drafts, routine correspondence, actual incident material, configurations, credentials, personal contacts, and technical data. DOE's acknowledgment and clarification records fixed that boundary before the search was completed.

The search certification reports 16,842 raw results, 1,284 deduplicated candidates, forty-six files reviewed by custodians, and twelve responsive records containing 200 source pages. Kira Morrow describes custody, Dalen Saye describes search processing, Ari Tern describes program context, and Milo Crest describes record liaison work. Their names and roles are fictional.

DOE withheld three records and fifty-four pages completely, partly released seven records and 124 pages, and released two records and twenty-two pages in full. Of 146 produced images, sixty-eight contained no blackout and seventy-eight were redacted. The redacted set cites 7(E) on sixty-two images, 7(F) on fifty-one, and both on thirty-five. Every fully withheld page cites 7(E), and thirty-nine also cite 7(F).

Vaughn and Supplemental Excerpts

The public Vaughn materials identify field types without giving them operational meaning. The decision-tree sample displays [REDACTED—FICTIONAL DECISION CONDITION], [REDACTED—FICTIONAL RESPONSE ORDER], and [REDACTED—FICTIONAL ESCALATION VALUE]. Other samples use [REDACTED—FICTIONAL DUTY ROLE], [REDACTED—FICTIONAL SAFETY REFERENCE], and [REDACTED—FICTIONAL CONTACT CHANNEL] where the agency invokes safety or coordination rationales.

DOE's entries assign 7(E), 7(F), or both and state predicted circumvention or individual-safety consequences. Open Grid disputes whether every recurring category is sufficiently connected to its asserted consequence and whether surrounding administration was separated. Both parties agree that the public notices themselves disclose no protected value.

RLS-OG-002 added seventeen passages on eleven replacement pages without adding a responsive record or source page. Six replacement pages contain two newly released passages each, and five contain one each. The excerpts show restored headings, approval language, and narrative context, while the asserted operational relationships remain represented only by notices. The parties disagree about whether the updated review establishes complete segregation.

Litigation and Order Excerpts

Open Grid's summary-judgment papers accepted that adequately supported operational decision-tree relationships may fall under 7(E), while challenging categorical 7(F), segregability, and broad sealing. DOE's cross-motion defended the remaining categories through its declarations and controlled samples. The public briefs contained no authentic operational value.

The district court accepted the law-enforcement threshold, sustained the asserted 7(E) and 7(F) categories, found the remaining material nonsegregable, and restricted extensive judicial filings. Final judgment entered for DOE on January 2, 2026. Teren Wye later certified the docket and transmitted the record for this appeal.

The appellate parties preserve their distinct positions. Open Grid seeks affirmance only for the supported nonpublic trigger, response-order, escalation, and implementation relations under 7(E), with vacatur and remand on the other three subjects. DOE seeks affirmance, or a limited remand without immediate disclosure if additional explanation is required. Neither party asks this Court to publish real cyber instructions, and the excerpts contain none.

Joint Certification

Counsel jointly certify that the selected public excerpts fairly identify the portions of the certified record needed for the questions presented. Omission from this short volume does not mean that another certified item is irrelevant or absent. If a statement here conflicts with the certified source, the source controls.

The volume preserves the fixed arithmetic of twelve responsive records and 200 source pages, the disposition totals, the production-image counts, and the seventeen-passage supplemental release. It does not merge the agency disclosure question with the separate law governing access to judicial filings.

Tamsin Roe and Leo Marr for Open Grid and Corin Pell for DOE further certify that this public volume contains only the six approved redaction notices and no inert controlled label. Its paired controlled counterpart covers the same page subjects in independently worded prose. Service occurred through the synthetic docket on May 4, 2026. No inclusion in the controlled counterpart creates a continuing entitlement to access; any authorized session remains specific to that document and exact resolved closure.
