AGENCIES, SYSTEMS, IDENTIFIERS, AND EVENTS — NOT A REAL
FILING OR CYBERSECURITY GUIDE**

Public Redacted Response-Coordination Playbook Appendix

Filed: September 8, 2025 **Synthetic docket:** SYN-DMD-25-CV-0914 **Access:** Public counterpart

This exhibit is the public counterpart of a seven-page appendix from the wholly fictional Grid Sentinel exercise collection. It describes governance and coordination at a level that cannot be used to operate, reach, test, or interfere with any system. The appendix contains no real facility, person, address, credential, equipment, topology, command, protocol, port, vulnerability, or response timing.

The source appendix accompanied an approved exercise playbook. Its administrative purpose was to state who maintained the document, how a revision became final, and how participants recorded that an exercise matter had been referred for review. General text of that kind appears below. Fields that DOE associates with an operational assignment, safety type, or contact category are replaced by the approved fictional notices [REDACTED—FICTIONAL DUTY ROLE], [REDACTED—FICTIONAL SAFETY REFERENCE], and [REDACTED—FICTIONAL CONTACT CHANNEL].

The public copy follows the same seven semantic divisions as the controlled counterpart. A notice occupies the place of the corresponding inert label, but it reveals no value. Page correspondence is supplied for judicial comparison only; it does not suggest that every hidden field is exempt or that surrounding administrative language lacks independent meaning.

Administrative Ownership and Revision Control

The appendix identifies the fictional Office of Resilience Exercise Records as publication custodian. A document-control coordinator records the edition title, approval date, superseded edition, and the office that authorized release for exercise use. Those facts concern stewardship of a record rather than the substance of any response choice.

The edition history shows that the appendix was reviewed with the related decision-tree and escalation-matrix families. It directs readers to use the current approved text during an exercise and to retain the superseded edition as a historical record. Nothing in that direction identifies a condition, sequence, or implementable action.

A short assignment sentence contains [REDACTED—FICTIONAL DUTY ROLE]. A separate distribution field contains [REDACTED—FICTIONAL CONTACT CHANNEL]. DOE states that it removed the former because the field categorizes a human function and the latter because it categorizes a controlled communication path. The visible words still establish that administrative ownership, version approval, retention, and distribution acknowledgment were documented.

For this public counterpart, the redactions are descriptive tokens, not black boxes standing for real data. They do not disclose how a message would travel, who would receive it, or when anyone would act. The remainder can be read as a complete account of publication governance.

Exercise Coordination Framework

The appendix divides fictional coordination into intake, review, status recording, and closure. These are labels for recordkeeping phases, not operational directions. An exercise participant would document that a matter entered review, that an authorized group considered it, and that a final administrative status was recorded. The text does not identify a technical signal or the content of a response.

Within the review description, [REDACTED—FICTIONAL DUTY ROLE] replaces a category DOE treats as an assignment. A related circulation type appears as [REDACTED—FICTIONAL CONTACT CHANNEL]. The public version preserves the surrounding proposition: more than one fictional office may contribute information, but the publication record identifies a single accountable owner for each review entry. That proposition is useful for understanding governance even without the removed categories.

The coordination framework also distinguishes an exercise note from an agency determination. A note may preserve what was discussed; only an approved status entry changes the document's administrative history. This distinction does not depend on any concealed field.

No statement on this page supplies a real-world workflow. "Intake," "review," and "closure" are ordinary descriptive words. They carry no hidden clock, order of technical operations, threshold, or access instruction. The redaction notice marks only the asserted field type and is not a placeholder a reader could resolve.

Status Entries and Handoff Records

Each fictional exercise entry receives a neutral status description so later reviewers can understand whether a record remained open for administrative attention. The permitted public descriptions are “received,” “under review,” “documented,” and “closed.” They are archival labels and do not signal the condition of any network or facility.

The appendix calls for a handoff note when stewardship moves between offices. The note identifies the date of the administrative transfer, the edition involved, and whether supporting exercise material accompanied it. A field denoting the assigned category appears as [REDACTED—FICTIONAL DUTY ROLE]. Any communication classification is shown only as [REDACTED—FICTIONAL CONTACT CHANNEL].

DOE’s public presentation leaves visible the requirement that a transfer be acknowledged and that an unresolved documentation question be returned to the publication custodian. It removes the categories it associates with protective functions. Open Grid contends elsewhere that these surrounding sentences demonstrate why line-by-line segregation is possible; this exhibit records the text without resolving that legal dispute.

The handoff form does not contain a roster, personal contact, route, endpoint, or schedule. It is a fictional administrative model. A completed real incident form, if one existed, would fall outside the clarified request and is not reproduced or described here.

General Safety and Escalation References

The source includes a general reminder that exercise coordination must respect participant safety and existing agency policy. The reminder is public because it communicates no particular hazard or response. It says only that a participant should document a concern and refer it to an authorized fictional function.

The category of that function is replaced by [REDACTED—FICTIONAL DUTY ROLE]. A nearby safety classification is replaced by [REDACTED—FICTIONAL SAFETY REFERENCE]. These tokens convey the agency's asserted withholding category without identifying a person, location, danger, or protective measure. The page gives no operational escalation value and no sequence for acting on one.

An administrative note requires the exercise record to distinguish a safety-related referral from a routine publication question. The distinction ensures that later custodians do not mistake a sensitive exercise notation for a document-editing request. It does not define what event produces either classification.

The visible material therefore supplies context for the appendix's governance function: record the nature of a referral at a high level, preserve accountability for the exercise file, and avoid placing sensitive particulars in an ordinary distribution copy. Nothing here can be translated into a real technique or used to predict a real response.

Distribution and Acknowledgment

Approved editions are distributed only within the fictional exercise program. The public text records that recipients acknowledge the title and version received. It also requires the publication custodian to retain the acknowledgment with the edition history. Those requirements concern document integrity, not cyber operations.

The controlled distribution classification appears here as [REDACTED—FICTIONAL CONTACT CHANNEL]. The category assigned to the person who reconciles acknowledgments appears as [REDACTED—FICTIONAL DUTY ROLE]. Neither notice hides a real address or name. The exercise record deliberately contains no authentic contact information.

If an edition is superseded, the custodian sends a neutral retirement notice and marks the prior copy as historical. Recipients do not destroy the archival master. The appendix says that any later consultation must identify which edition was considered, allowing reviewers to separate a superseded policy record from the current approved text.

This page does not state how a response is initiated, routed, or performed. The ordinary verbs “distribute,” “acknowledge,” and “retain” refer to records administration. Their disclosure permits the public to understand version discipline while the asserted role and channel categories remain obscured.

Segregation Notes for the Public Copy

The public reviewer treated each sentence as a separate candidate for release. Title, purpose, revision history, approval language, archival obligations, and neutral status descriptions were retained where they remained intelligible without a concealed field. Redaction notices were placed only at semantic locations DOE associated with [REDACTED—FICTIONAL DUTY ROLE], [REDACTED—FICTIONAL SAFETY REFERENCE], or [REDACTED—FICTIONAL CONTACT CHANNEL] categories.

Some paragraphs contain both visible administration and a token. Their release demonstrates that a page need not be withheld merely because one field is disputed. Other source segments were not included where DOE concluded that the surrounding relationship would expose a protected arrangement. This copy does not adjudicate whether that conclusion was legally sufficient.

The appendix remains seven pages so the Court can compare corresponding semantic divisions under the governing access restrictions. Equal pagination is an access aid, not evidence that public and controlled sentences are verbatim. The counterparts are independently phrased and the notices provide no key to the inert labels.

DOE represents that it reviewed the public text for accidental inclusion of actionable material. The result contains only fictional governance concepts. Open Grid may rely on the visible administrative passages when arguing segregability, while authorized reviewers may assess the controlled fields without exposing them publicly.
