

**SYNTHETIC TRAINING RECORD — FICTIONAL PARTIES, PEOPLE,
AGENCIES, SYSTEMS, IDENTIFIERS, AND EVENTS — NOT A REAL
FILING OR CYBERSECURITY GUIDE**

Certificate of Confidentiality and Sealed-Materials Chart

Filed: November 11, 2025 **Synthetic docket:** SYN-DMD-25-CV-0914 **Certifying counsel:** Corin Pell, fictional counsel for DOE

Corin Pell certifies that every controlled item submitted with DOE’s consolidated sealing motion has an identified public redacted counterpart. The pairings preserve equal pagination and page-level semantic correspondence without duplicating prose. Public versions use approved category notices; sealed versions use arbitrary inert labels.

The certificate addresses nine disclosure groups: the primary Vaughn indexes, supplemental Vaughn indexes, decision-tree samples, escalation-matrix samples, coordination-appendix samples, Open Grid opening memoranda, DOE cross-motions, Open Grid reply memoranda, and in-camera declarations. Each group is supported by the public motion to seal and this certificate.

DOE asserts that the controlled items contain semantic relationships relevant to its 7(E), 7(F), segregability, and sealing positions. The certificate does not independently establish that the asserted interest justifies sealing. It identifies the material, confirms the existence of a public alternative, and records the requested common duration.

No controlled exhibit contains a real credential, system, person, location, communication method, or operational instruction. The word “confidentiality” describes the fictional court treatment rather than a genuine security classification.

Sealed-Materials Chart: Agency and Sample Records

Primary Vaughn group. Public Redacted Vaughn Index is paired with Sealed Unredacted Vaughn Index. Both contain nine pages. The public item remains accessible; the controlled item is requested under seal.

Supplemental Vaughn group. Public Redacted Supplemental Vaughn Index is paired with Sealed Unredacted Supplemental Vaughn Index. Both contain seven pages and address the same renewed-review subjects.

Decision-tree group. Public Redacted Grid Sentinel Operational Decision Tree is paired with Sealed Grid Sentinel Operational Decision Tree. Both contain seven pages. The public copy substitutes notices for controlled decision and ordering types.

Escalation-matrix group. Public Redacted Cyber-Incident Escalation Matrix is paired with Sealed Cyber-Incident Escalation Matrix. Both contain seven pages, including corresponding human-safety subjects.

Coordination-appendix group. Public Redacted Response-Coordination Playbook Appendix is paired with Sealed Response-Coordination Playbook Appendix. Both contain seven pages. Public administration remains visible while asserted duty, safety, or communication types are represented by notices.

For each group, DOE requests restriction through final district and appellate resolution, subject to later order. The motion provides the same general necessity and alternatives explanation for the group.

Sealed-Materials Chart: Memoranda and Declaration

Open Grid opening group. Public Redacted Open Grid Motion and Memorandum for Summary Judgment is paired with Sealed Highlighted Open Grid Motion and Memorandum for Summary Judgment. Each has twelve pages.

DOE cross-motion group. Public Redacted DOE Cross-Motion and Opposition is paired with Sealed Highlighted DOE Cross-Motion and Opposition. Each has thirteen pages.

Open Grid reply group. Public Redacted Open Grid Reply and Cross-Opposition is paired with Sealed Highlighted Open Grid Reply and Cross-Opposition. Each has ten pages.

In-camera declaration group. Public Redacted In-Camera Review Declaration is paired with Sealed In-Camera Review Declaration. Each has six pages. The declaration pair describes review methodology and DOE's controlled category position.

The public memoranda present complete legal arguments without the inert labels. The public declaration states the review at a level intended for open access. DOE contends that the controlled versions allow the Court to inspect field relationships and highlighted reasoning. It does not claim that a member of the public needs the controlled copies to understand what relief each party seeks.

Certification and Handling Request

I certify that the chart lists every district-court twin for which DOE seeks maintained sealing. I further certify that a public counterpart is filed or tendered for each controlled item and that no request is made to seal the public motion, this certificate, or the overall docket.

The controlled versions use only Condition-Aster, Sequence-Beryl, Value-Cinder, Role-Dovetail, Safety-Echo, and Channel-Fable as semantic labels. Those terms are fictional, nontechnical, and incapable of directing conduct. Their controlled treatment exists solely to model the Court's access determination.

DOE asks that controlled access be limited to the Court and authorized counsel, that access not persist merely because a public twin was viewed, and that the set remain restricted for the common duration stated in the motion. Any later modification should occur by court order.

I declare that the foregoing is correct within this synthetic training record. The certificate is signed by Corin Pell on November 11, 2025, and served through the fictional docket on Tamsin Roe and Leo Marr. It authenticates the chart but offers no independent opinion that the consolidated explanation satisfies every requirement of Local Rule 105.11.
