AGENCIES, SYSTEMS, IDENTIFIERS, AND EVENTS — NOT A REAL
FILING OR CYBERSECURITY GUIDE**

Certified District-Court Docket Report

Certified: February 2, 2026 **Synthetic docket:** SYN-DMD-25-CV-0914 **Clerk:** Teren Wye, fictional district clerk

This report states the public docket history of Open Grid Archive v. United States Department of Energy through the filing of the notice of appeal on February 2, 2026. It is compiled from the fictional exercise docket and the clerk's access ledger.

The action began April 7, 2025 and concluded on the merits with a separate final judgment entered January 2, 2026. The docket includes an administrative record, pleadings, declarations, public and controlled Vaughn materials, paired exercise samples, cross-motions, sealing papers, an opinion, and the judgment.

Entries described as controlled remain governed by the November 26 sealing order. Their titles and dates are public; their restricted contents are not reproduced in this report. Every controlled filing has a public counterpart identified on the docket.

The record is wholly synthetic. The clerk's certification confirms chronology, title, filing status, and access designation only. It does not authenticate a real agency record or any cyber information.

Opening of the Civil Action

On April 7, 2025, Open Grid filed its complaint for declaratory and injunctive relief under FOIA. The case was assigned the synthetic district number shown above and assigned to fictional Judge Sable Hart. Tamsin Roe and Leo Marr entered appearances for Open Grid.

The complaint included or described the administrative request chain: the June 3, 2024 request, June 10 acknowledgment, June narrowing correspondence culminating on June 21, August 16 initial decision, August 30 appeal, September 6 appeal acceptance, and October 7 final administrative decision. Those materials were later lodged as the first five documents in the certified lower record.

DOE appeared through Corin Pell. Service was recorded through the fictional exercise channel, with no real address or government system involved. The public docket identified request DOE-FOIA-2024-OG-041 and the administrative decision references without attaching any live data.

The opening entries state that Open Grid challenged exemption and segregability determinations. The search issue was pleaded but later not pressed at summary judgment. No damages claim or fee dispute was docketed.

Pleading and Initial Declaration Entries

DOE filed its answer on May 5, 2025. It admitted the existence and dates of the fictional request process, denied unlawful withholding, asserted Exemptions 7(E) and 7(F), and stated that all reasonably segregable material had been released.

On August 4, DOE filed three public declarations. Elian Voss addressed request processing, production accounting, exemption review, and segregability. Kira Morrow addressed custody of approved Grid Sentinel editions, document families, and field categories. Dalen Saye described the Beacon, Driftglass, and Harborline search and deduplication process.

Those submissions reported 16,842 raw hits, 1,284 deduplicated candidates, forty-six custodian-reviewed items, and twelve responsive records comprising 200 pages. The public docket also recorded the three-record, fifty-four-page complete withholding and the seven-partial, two-full-release distribution.

All three declarations were public. Their exhibits were separated according to the later access chart. The docket does not contain a real repository export, credential, configuration, contact roster, or incident record.

Vaughn and Supplemental Review Entries

The primary public Vaughn index and its controlled counterpart were lodged with the August 4 declaration set. Each has nine pages. The public index identifies the twelve responsive records and uses category notices; the controlled copy uses only inert exercise labels.

DOE conducted a renewed review after the initial filings. On September 8 it filed a supplemental search and segregation declaration, a seven-page public supplemental Vaughn index, and a seven-page controlled counterpart. The docket recorded production RLS-OG-002.

The supplemental filings reported no new responsive record and no change to the 200-page source universe. They reported seventeen passages newly disclosed across eleven replacement images, with two passages on six images and one passage on five.

The public supplemental materials remained open. The controlled primary and supplemental indexes were provisionally restricted pending a sealing ruling. Their titles, dates, and paired status were visible in the clerk's report. The underlying administrative record was not counted twice merely because the litigation included two access forms.

Paired Sample-Record Entries

Also on September 8, DOE lodged three public and controlled sample pairs. The Operational Decision Tree pair contains seven pages in each form. The escalation-matrix pair also contains seven pages apiece. The Response-Coordination Playbook Appendix pair contains seven pages apiece.

The public samples use descriptive notices for decision, order, guideline, role, safety, and communication categories. The controlled samples use fabricated words without real meaning. The docket describes the samples as litigation exhibits rather than additional responsive agency records.

Public versions were available on filing. Controlled versions were placed under temporary restriction so the Court could compare semantic positions. The clerk recorded that each pair had equivalent subject ordering but independently composed text.

The sample entries contain no operative table, technical instruction, response timing, system map, address, or authentic assignment. Their purpose on the docket was to permit legal argument about Exemptions 7(E), 7(F), Vaughn specificity, and segregability without exposing actionable information.

Open Grid Summary-Judgment Filings

Open Grid filed its motion and opening memorandum on October 6, 2025. A twelve-page public version presented the complete factual and legal argument using category notices. A twelve-page controlled highlighted counterpart was tendered for in-camera comparison.

The motion challenged DOE's categorical 7(F) explanation, the asserted completion of segregation review, and the breadth of proposed sealing. It accepted the search for present purposes and did not demand disclosure of any operational implementation relationship adequately protected by 7(E).

Tamsin Roe and Leo Marr signed the filing as fictional counsel. The public docket recorded service on Corin Pell. The controlled counterpart was not made publicly viewable, but its title, date, page count, and relationship to the public memorandum were entered.

The Court established a schedule for DOE's combined opposition and cross-motion and for Open Grid's reply. No hearing transcript or additional evidentiary attachment was filed at this stage.

DOE Cross-Motion Entries

On October 27, DOE filed a public redacted cross-motion and opposition containing thirteen pages. It tendered a thirteen-page controlled highlighted counterpart. Corin Pell signed both submissions within the fictional exercise.

DOE defended the law-enforcement purpose, nonpublic decision and guideline relationships under 7(E), functional human-safety categories under 7(F), its final segregation protocol, and paired sealing. It relied on the declarations, indexes, samples, and supplemental release.

The public version remained accessible. The highlighted version was provisionally restricted. The docket notice stated that controlled labels were inert and that no filing contained actual cyber-response instructions or authentic information.

Open Grid's response deadline was set for November 10. The Court allowed the parties to cite the corresponding public pages in open submissions and required controlled references to remain within authorized filings. The scheduling entry did not decide the merits or grant permanent sealing.

Reply and Sealing-Motion Entries

Open Grid filed its ten-page public reply and cross-opposition on November 10, together with a ten-page controlled highlighted partner. The reply argued that DOE's categorical safety nexus and passage-level segregation proof remained inadequate while proposing preservation of any valid operational redaction.

On November 11, DOE filed the Consolidated Public Motion to Maintain Sealing and the Certificate of Confidentiality and Sealed-Materials Chart. The motion identified nine controlled disclosure groups, confirmed public counterparts, discussed alternatives, and proposed a common duration through district and appellate resolution.

The motion and certificate were public. Notice remained on the docket for fourteen days. Open Grid objected to aggregate rather than document-specific treatment but did not oppose temporary in-camera consideration.

The clerk's access ledger associated each controlled item with the public motion and certificate. Viewing a public counterpart did not grant controlled access. The ledger records authorization status without reproducing any label, path, digest, or restricted content.

In-Camera Declaration and Sealing Order

DOE filed a six-page public in-camera review declaration on November 12 and tendered a six-page controlled version. Elia Voss described the category review, 7(E) context, categorical 7(F) position, and final segregation results.

After the notice period, Judge Hart entered the Order on Sealing and In-Camera Review on November 26. The seven-page public order granted the consolidated motion, accepted the controlled set for review, and maintained every listed counterpart under one access restriction.

The order found generally that the asserted category relationships warranted control, that public twins were an adequate alternative, and that one duration should apply. It did not require passage-level public versions beyond those already filed or make separate necessity findings for every document.

The order expressly reserved the FOIA merits. It directed that public counterparts remain open and that controlled materials be used only through the fictional court's authorized process. The docket recorded no later district order modifying that access ruling before judgment.

Opinion, Judgment, and Notice of Appeal

On January 2, 2026, Judge Hart entered the twenty-page Memorandum Opinion and Order on Cross-Motions for Summary Judgment. The opinion denied Open Grid's motion, granted DOE's cross-motion, sustained the disputed 7(E) and 7(F) withholdings, accepted DOE's segregation showing, and maintained the sealing order.

A separate two-page Final Judgment was entered the same day in favor of DOE on all claims. The docket marked the action closed, subject to any timely post-judgment filing or appeal. No post-judgment motion was filed.

On February 2, Open Grid filed a four-page Notice of Appeal. It identified the January 2 judgment, the merits opinion, and the sealing order. The notice contained no controlled attachment and did not state or predict any appellate disposition.

This certified report was generated after the notice was entered. The district clerk began preparing the record for transmission while preserving the controlled designations. No appellate brief, order, or judgment appears in the district docket as of certification.

I, Teren Wye, certify that the docket through February 2 accurately contains the administrative materials, pleadings, evidence, motions, orders, opinion, judgment, and notice described in this report. Public entries may be transmitted ordinarily; controlled counterparts remain subject to the November 26 order. The record has no pending merits claim, and preparation for transmittal changes no disposition or access designation.

I certify these fictional facts on February 2, 2026. This report is not a real court docket, filing, or cybersecurity guide.
