

BeaconRoute Provisioning Ledger Through July 1

Document date: July 1, 2024 Filed: November 3, 2025 Civil Action No. SYN-NDWV-25-CV-0618 Attachment to District ECF No. 43 District ECF No. 43-1

Ledger Summary

System: BeaconRoute pilot environment Customer: Copper Kestrel Logistics, LLC Ledger period: April 15 through July 1, 2024

This ledger records technical Identifier provisioning for terminal environments associated with the Copper Kestrel pilot. It is compiled from credential issuance records, environment mappings, and status confirmations available through the close of July 1.

Total Identifiers provisioned: 41. Twelve entries, T-01 through T-12, correspond to the Licensed Terminals in the April 15 Pilot License. Twenty-nine entries, X-01 through X-29, correspond to the environments in Copper Kestrel's June 3 proposed change order.

The status “provisioned” means that administrative and technical steps created a system reference or credential in the Asterglen-controlled platform after a Copper Kestrel request. It does not state whether the connection was configured, whether traffic occurred, or whether a particular use was permitted. Those questions require the activity log and governing instructions.

The twenty-nine X-series entries were created for technical evaluation subject to the written conditions issued June 10. The change proposal had no Asterglen acceptance recorded as of this ledger date.

Licensed-Terminal Entries T-01 Through T-12

Entry	Identifier	Provisioned	Ledger status
T-01	BR-A01	April 16	pilot active
T-02	BR-A02	April 16	pilot active
T-03	BR-A03	April 17	pilot active
T-04	BR-A04	April 17	pilot active
T-05	BR-A05	April 18	pilot active
T-06	BR-A06	April 18	pilot active
T-07	BR-A07	April 19	pilot active
T-08	BR-A08	April 19	pilot active
T-09	BR-A09	April 22	pilot active
T-10	BR-A10	April 22	pilot active
T-11	BR-A11	April 23	pilot active
T-12	BR-A12	April 23	pilot active

The T-series count reconciles to the twelve entries in Schedule A of the signed Pilot License. Each Identifier is associated with one terminal code and ordinary pilot status. Administrative replacement of a credential would be recorded against the same terminal rather than treated as a new licensed environment.

No X-series entry is included in this table. Baseline readings from T-01 through T-12 may be used during a load evaluation to compare performance, but such comparative use does not change their licensed classification. The ledger shows no deletion, substitution, or addition within the T-series through July 1.

Proposed-Terminal Entries X-01 Through X-10

Entry	Identifier	Provisioned	Purpose at creation
X-01	BR-B01	June 18	mapping and connector check
X-02	BR-B02	June 18	restricted load preparation
X-03	BR-B03	June 18	authentication validation
X-04	BR-B04	June 19	mapping and field review
X-05	BR-B05	June 19	controlled connector setup
X-06	BR-B06	June 19	restricted load preparation
X-07	BR-B07	June 20	authentication validation
X-08	BR-B08	June 20	controlled connector setup
X-09	BR-B09	June 20	mapping and field review
X-10	BR-B10	June 21	restricted load preparation

These ten records trace to the first portion of Change Request CK-01. The purpose column reflects the request under which each Identifier entered the platform; it does not verify the later state of a connector. All were tagged “proposed/test” in the provisioning system through July 1.

Creation followed receipt of Copper Kestrel's acknowledgment of the June 10 conditions and preliminary endpoint information. The ledger does not contain a signed amendment, production effective date, or final expansion price. Any activity assessment must be performed from separate time-stamped event data.

Proposed-Terminal Entries X-11 Through X-20

Entry	Identifier	Provisioned	Purpose at creation
X-11	BR-B11	June 21	controlled connector setup
X-12	BR-B12	June 21	mapping and field review
X-13	BR-B13	June 24	authentication validation
X-14	BR-B14	June 24	restricted load preparation
X-15	BR-B15	June 24	controlled connector setup
X-16	BR-B16	June 25	mapping and connector check
X-17	BR-B17	June 25	restricted load preparation
X-18	BR-B18	June 25	authentication validation
X-19	BR-B19	June 26	mapping and field review
X-20	BR-B20	June 26	controlled connector setup

This middle group was created in small batches so that endpoint information could be reviewed before access was released. The provisioning record identifies Copper Kestrel as customer and Meridian Silt as the integration role for configuration work.

Every entry in this table retained the proposed/test designation on July 1. That designation records the administrative basis for issuance; it is not a conclusion that every later event complied with the testing protocol. Conversely, an issued credential alone does not establish operational routing. Connector logs, traffic source, and contemporaneous direction must be examined to classify use.

Proposed-Terminal Entries X-21 Through X-29

Entry	Identifier	Provisioned	Purpose at creation
X-21	BR-B21	June 26	restricted load preparation
X-22	BR-B22	June 27	authentication validation
X-23	BR-B23	June 27	controlled connector setup
X-24	BR-B24	June 27	mapping and field review
X-25	BR-B25	June 28	restricted load preparation
X-26	BR-B26	June 28	mapping and connector check
X-27	BR-B27	June 28	controlled connector setup
X-28	BR-B28	July 1	authentication validation
X-29	BR-B29	July 1	restricted load preparation

The final nine records complete the requested group of twenty-nine. With the twelve T-series entries, the cumulative provisioning count reached forty-one on July 1, 2024. No other Copper Kestrel terminal Identifier appears in the ledger for the covered period.

X-28 and X-29 were added after endpoint information passed the initial format check. Their July 1 creation brought the technical inventory into numerical alignment with Copper Kestrel's proposal but did not alter the contract schedule. As with the earlier X-series records, subsequent state must be established from configuration and activity evidence rather than inferred from issuance date.

Provisioning History and Control Notes

April 15: Pilot License effective for twelve terminal environments. No credential event posted on the signing date.

April 16–23: The platform provisioning process created BR-A01 through BR-A12 and associated them with T-01 through T-12. The pilot inventory then reconciled to Schedule A.

June 3: Copper Kestrel submitted Change Request CK-01 seeking twenty-nine additions. The proposal entered commercial and technical review; no acceptance was posted.

June 10: Asterglen issued load-test conditions. Copper Kestrel acknowledged that the proposal remained unsigned and that provisional credentials were not production approval.

June 18–28: Asterglen issued BR-B01 through BR-B27 in controlled batches after receiving mapping information. The entries were designated proposed/test.

July 1: The provisioning process created BR-B28 and BR-B29. Cumulative totals became twelve licensed-series Identifiers and twenty-nine proposed-series Identifiers, for forty-one overall.

Control note: the ledger contains no field that independently changes the Pilot License. Contract scope is maintained in the signed schedule and completed change orders. Provisioning staff may implement a test request after written technical approval, but the commercial-status field remains proposed until authorized representatives complete the change process.

No production effective date was entered for an X-series record through July 1.

Reconciliation and Record Attestation

The ledger was reconciled by comparing three independent values: the signed Schedule A count of twelve, the June 3 requested-addition count of twenty-nine, and the provisioning-system total of forty-one. The arithmetic is $12 + 29 = 41$, with no unmatched Identifier in the covered customer account.

For clarity, “licensed-series” describes the twelve T-coded records associated with the signed pilot. “Proposed-series” describes the X-coded records created to support review of the unsigned request. “Provisioned” means a technical record and access mechanism existed. None of those shorthand terms determines whether a later event was simulated, monitored, operational, authorized, or outside written conditions.

This copy reports information through the close of July 1, 2024. It does not incorporate the later July 8 call, the July 18 compliance review, or the July 22 communications. Those events postdate the period stated in the title.

The undersigned records function attests that the tables accurately transcribe the provisioning entries maintained for this customer as of the stated cutoff. The attestation does not offer a legal interpretation of the Pilot License or resolve any dispute about oral permission.
