

Combined physical packet for Agency Exhibits P-4, P-5, and P-6

Filing control and logical-exhibit boundary

This single ten-page physical file contains three separately identified logical exhibits. P-4 is the authenticated searchable export and transcription of four selected messages. P-5 is the Civic Integrity complaint receipt and its routing audit. P-6 is Mara Deyn's translation certification, the clinic notation, and the two procurement-register versions. The shared file does not merge their evidentiary foundations or status.

The packet contains controlled text exports rather than raster reproductions. Every source object below states its complete canonical UTF-8 bytes, with no terminal newline, followed by the SHA-256 of exactly those bytes. The final map assigns every logical exhibit to exact pages and object IDs. The April filing receipt lists P-4, P-5, and P-6 separately as lodged with a merits ruling required.

P-4 message exports — objects 1 and 2

KAL-MSG-1|2023-07-13T08:22:00+09:00|sender=harbor_lantern_01|
recipient=family_account|source_text=Nor kai luma doset eva.|
attachment=none

SHA-256:

c634626d66ffe2705fb504903cb6a90a50ceb455d11215071ae419c013bdefc3.

Mara Deyn translates the source text as, “The North Quay Lamps file is still open.” The export shows no attachment and does not identify the sender beyond the displayed handle.

KAL-MSG-2|2023-08-09T19:04:00+09:00|sender=harbor_lantern_02|
recipient=family_account|source_text=Kada anex dal reva?|
attachment=none

SHA-256:

13d243c3dd7d367a2a091e1bf596883bb4625ba264d36214a36c26951b6475.

Deyn translates the question as, “When will the annex clerk return?” Authentication rests on S.M.’s device-transfer log; translation does not establish authorship or institutional affiliation.

P-4 message exports — objects 3 and 4

KAL-MSG-3|2023-08-17T06:41:00+09:00|sender=harbor_lantern_03|
recipient=family_account|source_text=Korik 16:42 nosh.|
attachment=none

SHA-256:

29cc5d4f974ca33b81214343a2af227ac5fda767858816c9a1d80f4ddb04eb63.

Deyn translates the sentence as, “The correction-log time is 16:42.” That time also appears in the municipal audit export, but the match does not identify the message sender.

KAL-MSG-4|2023-08-28T22:10:00+09:00|sender=harbor_lantern_04|
recipient=family_account|source_text=Regional vek ARM-RX-14.|
attachment=none

SHA-256:

48572608f2d08537c42df701f8f01ed7315190e13e004d51cc1c0be73bf76b31.

Deyn translates the sentence as, “The regional inquiry follows employment code ARM-RX-14.” These are four selected P-4 messages. The family packet separately records four post-departure messages from August 9 through September 2 and a fifth relevant message dated July 13.

P-5 complaint receipt — controlled object

KAL-OCI-1|accepted=2023-06-07T11:32:00+09:00|
complaint=OCI-23-441|subject=detention after procurement
disclosure|witness=SM|initial_route=IC-2|
requested_action=independent conduct review

SHA-256:

2e9b8904310bf6c0060c36d4c945092bcdee24eea9b00a04b0b68a947f12d051.

The complete receipt bytes record acceptance on June 7 at 11:32, complaint identifier OCI - 23 - 441, witness S.M., and initial route IC - 2. Deyn translates the subject as “detention after procurement disclosure” and the requested action as “independent conduct review.” The receipt proves submission and initial routing; it promises no result and identifies no later destination. S.M. authenticates the copy collected at intake. Nadia Pel separately explains the route-code vocabulary. This page is the first of two pages assigned to logical Exhibit P-5.

P-5 routing audit — controlled object

KAL-ROUTE-1|2023-06-09:link=CIV-23-184 via ARM-RX-14|
2023-06-10:destination=RC-4 Unit Four regional command
reason=operational-security nexus|2023-06-30:status=regional
response pending|interview=none

SHA-256:

c54179ed8d35de13bb4767c3efc8ddb4b2f30d7305e23498b6c0c6b03ea679.

The full audit bytes establish a staged history without aliases. On June 9, OCI - 23 - 441 was linked to procurement referral CIV - 23 - 184 through employment code ARM - RX - 14. On June 10, destination changed from initial route IC - 2 to RC - 4, Unit Four regional command, for an operational-security nexus. On June 30, the status remained “regional response pending,” with no interview logged. Deyn translates the field labels but offers no view about the recipient's knowledge or the merits of the complaint. This page completes logical Exhibit P-5.

P-6 clinic notation — controlled object

KAL-CLINIC-1|registered=2023-05-21T14:20:00+09:00|
history=reported assault during two-day absence|observed=limited
left-shoulder elevation;right-ankle swelling;rib
tenderness;hoarse voice|care=shoulder sling;anti-inflammatory
medication;hydration instruction;return precautions

SHA-256:

ce82b649862ff37d47ccb97820c887b7aa1793b020b94116c2fa540e3749143d.

The source registers A.R.M. on May 21, 2023 at 14:20. Deyn translates the observations as limited left-shoulder elevation, right-ankle swelling, rib tenderness, and hoarse voice. Recorded care is a shoulder sling, anti-inflammatory medication, hydration instruction, and return precautions. The notation identifies neither an assailant nor a legal conclusion. Clinic custodian NB-3 authenticates the fields. The exact date, time, and sides match the family packet and are not presented as a later reconstruction; they are transcribed directly from the controlled source.

P-6 first procurement register — grouped version

KAL-LEDGER-1|version=first|threshold=25000|cycle=NQ-APR-A|
NQL-3101=22900|NQL-3102=22700|NQL-3103=23400|NQL-3104=22600|
NQL-3105=22800|NQL-3106=23000|total=137400|grouping=all six
grouped

SHA-256:

de363cf933ea6218b608fce156b0a79df3e7340f362be5e8eca81874045f3642.

The complete register bytes list six invoices. Their amounts are 22,900; 22,700; 23,400; 22,600; 22,800; and 23,000 units, totaling 137,400. Every invoice is below the 25,000-unit secondary-review threshold. This first version groups all six under maintenance cycle NQ-APR-A. Deyn translates the column headings for version, threshold, cycle, total, and grouping; the identifiers and numbers require no translation. The register does not establish why the classification was chosen.

P-6 corrected procurement register — grouping removed

KAL-LEDGER-2|version=corrected|threshold=25000|cycle=none|
NQL-3101=22900|NQL-3102=22700|NQL-3103=23400|NQL-3104=22600|
NQL-3105=22800|NQL-3106=23000|total=137400|grouping=removed;each
urgent standalone repair

SHA-256:

72e118dec40c82bc0a8b2c6c444bbd5bdf6f5058079bed43976e208808f3e50a.

The corrected version preserves the same six invoice identifiers, individual amounts, 25,000-unit threshold, and 137,400-unit total. It removes the NQ-APR-A grouping and labels each invoice an urgent standalone repair. The direction of change is therefore first grouped, then corrected to remove grouping. A.R.M. and Pel may explain why the audit trail drew attention, but Deyn does not decide whether the correction was lawful or whether the pattern proves invoice splitting.

P-6 consolidated translation bytes and source register

KAL-TRANS-1|MSG1=The North Quay Lamps file is still open.|
MSG2=When will the annex clerk return?|MSG3=The correction-log
time is 16:42.|MSG4=The regional inquiry follows employment code
ARM-RX-14.|OCI=detention after procurement
disclosure;independent conduct review|ROUTE=linked June
9;destination changed June 10;regional response pending June 30|
CLINIC=May 21 at 14:20;limited left shoulder;right ankle
swelling;rib tenderness;hoarse voice|LEDGER=six invoices below
25,000;total 137,400;first grouped;corrected grouping removed

SHA-256:

b8928fc635fc914b9abc49c20ed5a307067c5692a7eb9109158c81723eb1ee71.

Deyn used the ten listed controls: four message objects, one complaint receipt, one routing audit, one clinic notation, two register versions, and this consolidated translation object. Brackets are not used to supply missing facts. The source controls expose complete searchable bytes and exact digests, while S.M., NB-3, the municipal custodian, and Pel provide the separate foundations.

Certification and exact physical-to-logical map

Mara Deyn declares fluency in English and Kalyrian, independence from the parties, and no financial interest beyond a fixed fee. Signed April 12, 2024. P-4 maps to agency pages 106–107 and objects KAL-MSG-1 through KAL-MSG-4. P-5 maps to agency pages 108–109 and objects KAL-OCI-1 and KAL-ROUTE-1. P-6 maps to shared control page 105 and agency pages 110–114, with objects KAL-CLINIC-1, KAL-LEDGER-1, KAL-LEDGER-2, and KAL-TRANS-1 plus this certification.

The physical file is `09-certified-translation-packet.pdf`, ten pages, agency pages 105–114. The map is exhaustive: every one of its ten pages is assigned once as a primary logical page, and every source object is assigned to one logical exhibit. P-6 translates P-4 and P-5 source text without changing their separate logical identity. The April filing receipt preserves each exhibit's separate status, and the packet contains no raster image object whose absence could be mistaken for missing source text.
