

Initial certified index and transmittal

February 18, 2025 cover

The agency records office transmits the following production for judicial review of Board docket SYN-BIA-25-0113. The cover identifies the January 13 final order and the February 11 petition. Files appear in the sequence-control order recorded below, with their assigned page labels retained. The Board materials end at page 218, and this eight-page index packet follows at pages 219 through 226.

The production contains sixteen PDF files and 208 physical pages. The index states the title, file control, page count, and labeled range for each selected item. Hash and open checks were completed against those selected files. The records officer certifies this production under the method stated on page seven and directs the parties to the discrepancy-notice procedure on page eight.

Index segment A — charging through family packet

Seq.	File control	Description	Pages	Labels
01	01-notice-to-appear.pdf	Notice to Appear, charge, and service history	8	1–8
02	02-master-calendar-pleadings.pdf	Master-calendar pleadings and CAT-only schedule	12	9–20
03	03-cat-application.pdf	CAT application and indexed chronology	12	21–32
04	05-sibling-declaration.pdf	S.M. declaration and communication log	10	51–60
05	06-family-corroboration.pdf	Family, employment, and authentication packet	12	61–72

The listed sequence moves from page 32 to page 51. The assigned labels are copied from the selected files rather than renumbered for this transmission. The file-open checklist records success for all five items. This segment makes no inference from the numerical interval and supplies no item for it. The next segment continues with expert, medical, exhibit, and hearing materials.

Index segment B — reports, combined packet, and transcripts

Seq.	File control	Description	Pages	Labels
06	07-country-conditions-report.pdf	Country-conditions and routing report	20	73–92
07	08-trauma-medical-evaluation.pdf	Trauma and medical evaluation	12	93–104
08	09-certified-translation-packet.pdf	Combined physical P-4/P-5/P-6 packet	10	105–114
09	10-merits-hearing-transcript-vol-1.pdf	Merits transcript, volume 1	24	115–138
10	11-merits-hearing-transcript-vol-2.pdf	Merits transcript, volume 2	24	139–162

The combined physical packet remains one file in this production, with its internal P-4, P-5, and P-6 logical mapping unchanged. The transcript descriptions identify testimony and exhibit rulings without restating those rulings in this index. File dimensions, page counts, and SHA-256 values for the five selected objects match the assembly manifest.

Index segment C — agency decisions and Board proceedings

Seq.	File control	Description	Pages	Labels
11	12-ij-decision.pdf	Immigration judge decision	16	163–178
12	13-bia-notice-appeal.pdf	Board notice of appeal	4	179–182
13	14-bia-opening-brief.pdf	A.R.M. Board opening brief	16	183–198
14	15-dhs-bia-response.pdf	DHS Board response	12	199–210
15	16-bia-final-order.pdf	January 13 Board final order	8	211–218
16	17-initial-certified-index.pdf	This index and transmittal	8	219–226

The Board docket, filing dates, and service controls agree with the electronic docket display. No renumbering was performed during export. This index file follows the final order and closes the selected production at page 226. The sequence values are export controls and are not agency docket entry numbers.

Selected-file validation summary

The export validator opened each of the sixteen listed PDFs, counted 208 pages, read the first and last assigned label of each file, and compared each file's SHA-256 with the selected-object manifest. Every selected file passed those four checks. The validator also confirmed that no selected path was duplicated and that all file controls resolved within docket SYN-BIA-25-0113.

The check is limited to the selection returned by the export query. It verifies the listed file objects and their ordering; it does not reproduce the full electronic docket database on this page. The clerk review sampled the first and last textual line from every selected file and confirmed that the displayed descriptions matched the opened items. The results were signed at 09:42 on February 18 and attached to the transmission receipt.

Assembly log

The assembly log records SEQ-03 / 03-cat-application.pdf / 12 pages / labels 21-32, followed by SEQ-04 / 05-sibling-declaration.pdf / 10 pages / labels 51-60. It flags the change from 32 to 51 as LABEL_DISCONTINUITY_18, with cause UNRESOLVED. No deletion event, replacement event, or digest failure appears for any selected file. No object is assigned labels 33 through 50 in this log.

The log then proceeds continuously from labels 51 through 226. Its checksum covers the sixteen selected path, digest, count, and range tuples in sequence order. The log does not attribute the discontinuity to a cause or evidentiary ruling. The transmittal preserves the signal and directs a party to report a discrepancy by exact file and hearing control.

Initial certification

I certify that the sixteen documents listed in this index were selected from the electronic file for SYN-BIA-25-0113; that each selected file opens; and that its page count, assigned labels, and SHA-256 correspond to the assembly log. The selected production contains 208 pages: pages 1 through 32 and 51 through 226. The automated export and selected-file checklist report no failure.

Based on those checks, I certify the listed production as the complete agency materials for this transmission. This certification relies on the export selection and does not claim a field-by-field comparison with each hearing receipt. A party identifying an omitted or misstated item may invoke the discrepancy procedure on the following page. Executed by the agency records officer on February 18, 2025.

Service and discrepancy procedure

The agency records office served this index, the selected production, and the transmission receipt on counsel for both parties and lodged them with the court of appeals on February 18, 2025. Service controls identify the agency docket, appellate docket, dispatch time, recipient roles, sixteen-file count, and 208-page count.

A discrepancy notice must identify the challenged index line or absent file, the asserted exhibit or docket control, the relevant hearing date if known, and a source that permits comparison. The records office will preserve the original selection, query result, manifest, checklist, and service receipt while reviewing any notice. A later correction, if authorized, must leave this initial transmittal available as a distinct historical filing. Records officer and service clerk signatures are recorded through their docket role codes.
