

Exhibit receipt, file audit, and correction certification

March 3, 2025 Rule 16(b) stipulation and review

The parties signed the following complete UTF-8 stipulation bytes, with no terminal newline:

```
STIPULATION-16B|date=2025-03-03|docket=SYN-CA4-25-AG-4301|  
parties=ARM,DHS|agree=correct omission by restoring unchanged  
Agency Exhibit P-7 at agency record pages 33-50;file itemized  
corrected index;preserve initial transmission;exclude appellate  
proffer pages 1-8 from administrative record|authority=Fed. R.  
App. P. 16(b)|signatures=ARM-C-9,DHS-APP-4
```

SHA-256:

b26f4d1618332a6e006839a09c4ab77319bde4f58c6d3e219da4fbcfbe1ce855.

Under Federal Rule of Appellate Procedure 16(b), the stipulation authorizes correction of an omission in the review record. It is a March 3 appellate correction-process document, not evidence presented to the immigration judge on the merits. The records office therefore compares receipts, transcripts, decisions, and exact stored bytes without adding a new merits fact.

April 12 lodging receipt — complete table

Exhibit	Physical file or packet pages	Pages	April status
P-1	03-cat-application.pdf	12	lodged; merits ruling required
P-2	05-sibling-declaration.pdf	10	lodged; merits ruling required
P-3	06-family-corroboration.pdf	12	lodged; merits ruling required
P-4	09 packet pages 2–3; KAL-MSG-1 through KAL-MSG-4	2	lodged; merits ruling required
P-5	09 packet pages 4–5; KAL-OCI-1 and KAL-ROUTE-1	2	lodged; merits ruling required
P-6	09 packet pages 1 and 6–10; clinic, ledgers, translation, certification	6	lodged; merits ruling required
P-7	04-arm-sworn-declaration.pdf	18	lodged; merits ruling required

The clerk receipt identifies the combined ten-page physical P-4/P-5/P-6 packet once while assigning its ten primary pages exactly: two to P-4, two to P-5, and six to P-6. It records no merits ruling. P-7's stored control is 04-arm-sworn-declaration.pdf, lodged before the hearing.

September hearing receipt — complete table

Exhibit	Exact agency pages	Status and ruling date
P-1	agency pages 21–32	admitted September 17
P-2	agency pages 51–60	admitted September 17
P-3	agency pages 61–72	admitted September 17
P-4	agency pages 106–107	admitted September 17
P-5	agency pages 108–109	admitted September 17
P-6	agency page 105 and pages 110–114	admitted September 17
P-7	agency pages 33–50	admitted September 17; no authenticity or timeliness objection
P-8	agency pages 73–92	admitted September 17; testimony received September 18
P-9	agency pages 93–104	admitted September 17; weight addressed September 18

The receipt marks every exhibit P-1 through P-9 admitted. The P-4/P-5/P-6 logical sets resolve to the same combined physical file without overlap in their primary-page assignments. The receipt does not make any exhibit statement automatically true; it records the court's evidentiary status.

Transcript cross-check

At agency page 117 the first hearing volume identifies P-7 as the eighteen-page declaration lodged April 12. DHS states no authenticity objection, no timeliness objection, and no objection to admission; the judge admits P-7. At agency page 138 the clerk confirms admission of P-1 through P-9, specifically including P-4 messages and P-5 complaint-routing materials, and states that no objection remains to P-7.

At agency page 139 the second volume opens by confirming that the exhibit receipt records P-7 admitted. At agency page 161 the court again confirms P-1 through P-9 admitted, including P-4 and P-5, and states that no part of P-7 is excluded. Those contemporaneous hearing propositions match the September table and the stored logical mapping. The transcript is used here to verify the historic rulings, not to add evidence outside the closed merits record.

Decision and initial-transmission cross-check

At agency page 164 the October 22 decision lists P-1 through P-9 as admitted, identifies P-7 as eighteen pages, states that it was lodged April 12 and admitted without authenticity or timeliness objection, and excludes no part of it. The January 13 Board order likewise acknowledges P-7 as agency evidence.

The February packet at agency pages 219–226 is preserved unchanged. Its index jumps from the application at pages 21–32 to S.M.'s declaration at pages 51–60. Agency page 224 records LABEL_DISCONTINUITY_18, no deletion, replacement, or digest failure among selected files, and an unresolved cause. Agency page 225 certifies the 208-page selected production as complete under an export-selection method. These comparisons prove a conflict between the initial production and the preexisting receipts and decisions. They do not yet assign a technical cause; the next page records the audit finding.

File-audit finding: stale status and export query

The March audit finds two P-7 status values. The stored exhibit object retained April value `LODGED_MERITS_RULING_REQUIRED`; the September receipt table held `ADMITTED_2024-09-17`. The February export query selected exhibit objects whose stored-object status equaled `ADMITTED`, without joining the hearing receipt. It therefore returned no P-7 object and advanced to the next selected path.

The query log, status history, and selected-object manifest account for the eighteen-label discontinuity. They also confirm that no P-7 deletion, byte replacement, or digest failure occurred. The initial packet did not know or state this cause; it appears first in this March audit. The records officer preserves both status values, records the corrected current status, and requires a second clerk to compare all nine exhibit receipt rows against the corrected index before service.

Exact P-7 object identity

The restored object is `04-arm-sworn-declaration.pdf`, eighteen pages, titled “A.R.M. Sworn Declaration.” Its exact SHA-256 is `08e8294532c23fe9feb5962ca5b7780ae958178e6c8e2b4840d1ee28f3c5d212`. That digest matches the April receipt object, the copy offered at the September hearing, and the stored agency exhibit object. The audit opens all eighteen pages and compares the first and last text lines of each page.

No annotation, paragraph, event, translation, or page is inserted, removed, or replaced. The correction changes only whether the unchanged admitted object is present in the judicial-review production. The exact digest, page count, title, and source control distinguish this operation from supplementation with a different document.

Corrected placement and continuity

The unchanged P-7 object occupies agency pages 33–50, after the CAT application at pages 21–32 and before S.M.'s declaration at pages 51–60. Later agency labels remain unchanged. The corrected administrative set contains one page for every agency number 1 through 238, with no gap, duplicate label, or page assigned to two physical PDFs.

The combined P-4/P-5/P-6 physical file remains agency pages 105–114: P-4 is pages 106–107; P-5 is pages 108–109; P-6 is page 105 and pages 110–114. The second clerk compares that mapping with both receipt tables and confirms every P-1-through-P-9 row admitted. Restoring P-7 does not change the combined packet, transcript, decision, Board filing, or any citation already assigned after agency page 50.

Materials excluded from the Rule 16(b) correction

The audit identifies a separate T.R. declaration signed February 20, 2025 and an appellate proffer filed February 24. Those materials postdate the January 13 Board order. They were not lodged with the immigration court, admitted at the hearing, or presented to the Board. They remain appellate proffer pages 1–8 on the appellate docket and receive no agency-record label.

The Rule 16(b) stipulation expressly excludes appellate proffer pages 1–8 from the administrative record. The corrected 238-page set contains no page, text object, or digest from that proffer. This distinction preserves correction of the unchanged admitted P-7 while leaving any request concerning new material to a separate appellate determination. The records office makes no finding about the truth or legal effect of the proffer.

Itemized corrected index — documents 1 through 9

No.	File	Pages	Corrected labels
1	01-notice-to-appear.pdf	8	agency 1–8
2	02-master-calendar-pleadings.pdf	12	agency 9–20
3	03-cat-application.pdf	12	agency 21–32
4	04-arm-sworn-declaration.pdf, P-7	18	agency 33–50
5	05-sibling-declaration.pdf	10	agency 51–60
6	06-family-corroboration.pdf	12	agency 61–72
7	07-country-conditions-report.pdf, P-8	20	agency 73–92
8	08-trauma-medical-evaluation.pdf, P-9	12	agency 93–104
9	09-certified-translation-packet.pdf, combined P-4/P-5/P-6	10	agency 105–114

Rows 1 through 9 total 114 pages. Row 9's logical page/object map is fixed by both receipt tables and the packet certification. Row 4 carries the exact P-7 SHA-256 stated at agency page 233.

Itemized corrected index — documents 10 through 18

No.	File	Pages	Corrected labels
10	10-merits-hearing-transcript-vol-1.pdf	24	agency 115–138
11	11-merits-hearing-transcript-vol-2.pdf	24	agency 139–162
12	12-ij-decision.pdf	16	agency 163–178
13	13-bia-notice-appeal.pdf	4	agency 179–182
14	14-bia-opening-brief.pdf	16	agency 183–198
15	15-dhs-bia-response.pdf	12	agency 199–210
16	16-bia-final-order.pdf	8	agency 211–218
17	17-initial-certified-index.pdf	8	agency 219–226
18	18-exhibit-receipt-audit-corrected-certification.pdf	12	agency 227–238

Rows 10 through 18 total 124 pages; together both tables contain exactly eighteen unique PDFs and 238 pages. The records officer certifies this itemized index as the corrected Rule 16(b) production. Appellate proffer pages 1–8 are excluded and do not form a nineteenth administrative-record PDF.

Corrected transmission, signatures, and retention

On March 3, 2025 the agency records officer transmits the itemized corrected index, the unchanged P-7 object, this audit, and certification under the parties' Rule 16(b) stipulation. Both parties receive a service notice identifying the restored agency pages 33–50, exact P-7 digest, unchanged later labels, eighteen-file count, and 238-page count.

Records officer code ARO-16 and second-clerk code CLK-2 sign after comparing both receipt tables, the transcript propositions, the decision, the object digest, and every index row. The initial February selection, query, manifest, and certification remain retained as a distinct filing. The corrected transmission contains P-7 because it was already admitted; it contains no bytes from appellate proffer pages 1–8 and makes no merits determination concerning that separate proffer.
