Shipment Rate Confirmation and Custody Terms

Issued September 11, 2024 by Granite Heron Logistics, Inc. for shipment GHL-ASH-091224-087. Filed as an attachment to Granite Heron's answer on December 30, 2024 in Civil Action No. SYN-WDNC-24-CV-0520.

Carrier: Granite Heron Logistics, Inc.

Customer: Blue Ember Biologics, LLC

Material: BE-214 validation lot BE214-VL-2409A

Origin: Solstice Gate Analytics, Greenville, South Carolina

Destination: Blue Ember Biologics, Asheville, North Carolina

Granite Heron confirms a dedicated same-day deep-frozen movement on September 12. The origin appointment begins at 11:00, with requested departure promptly after custody verification. The destination window ends at 16:00. A short operational stop at the Fletcher facility is anticipated and remains within carrier custody.

The accepted trailer setpoint is minus seventy degrees Celsius. The authorized payload range is minus eighty through minus sixty, without an excursion allowance. The selected monitor is CryoTrace CTX-9 serial CTX9-44721. This confirmation implements Statement of Work SOW-BE214-VAL-04 and does not reduce the quality obligations incorporated there.

The dispatch assignment treats the shipment as a controlled validation movement rather than ordinary frozen freight. All personnel receiving the route sheet must review the exception contacts and record any variance before the vehicle leaves its current location.

Equipment and dispatch assignment

Planned tractor GH-4821 and trailer TR-7714 are assigned to the load. Dispatch shall verify availability, current maintenance status, adequate refrigeration supply, and a successful pretrip alarm check before releasing the vehicle. An emergency substitution must have equal frozen capability and appear in the custody file.

The load is exclusive within the controlled compartment. No incompatible freight or unrelated stop is authorized. Doors remain closed between origin and destination except for a documented safety or product-protection necessity. The driver shall preserve seal numbers and report any unexplained condition immediately.

The Fletcher stop is a powered staging event, not a break in the service. Before tractor power is removed, personnel shall engage and verify compatible electrical standby. If standby does not energize the refrigeration unit, the driver must maintain tractor power or move the load to qualified backup while dispatch seeks instructions.

Granite Heron's active frozen-biologics response profile applies. A local or remote environmental warning requires prompt review and escalation. The carrier must not wait for exterior damage or destination arrival before responding to a credible warming condition.

Custody sequence and required entries

At pickup, the driver will compare the shipment number, lot, shipper count, seal condition, logger serial, temperature instruction, and certificate of conformance. The origin and driver record the exact custody-transfer time in Eastern Daylight Time. Any discrepancy is resolved before departure or noted with both parties' acknowledgment.

The route log shall identify departure from Solstice Gate Analytics, arrival at Fletcher, each power-source transition, any inspection or corrective step, departure from staging, and arrival at Blue Ember. Times should be entered when the event occurs rather than reconstructed at the end of the shift.

At Asheville, the consignee will sign physical receipt and may state that the material remains quarantined pending logger review. Such a notation does not refuse delivery or concede product loss. Granite Heron will give Blue Ember the available environmental and custody records no later than the next business day.

An excursion triggers preservation of controller output, logger export, alarm messages, communications, photographs, and relevant maintenance material. A summary may explain the chronology but cannot substitute for source data. Missing or corrected information must be identified transparently.

Charges, value protection, and invoicing

The dedicated line-haul charge is the amount accepted through purchase order BE-PO-240819-2147. It includes ordinary fuel, the planned Fletcher staging, frozen-service handling, and delivery of the standard record packet. Waiting time beyond the included allowance requires signed or electronically verifiable arrival and release times.

Blue Ember selected enhanced declared-value protection for 1.35 million dollars of validation payload. The associated service premium is included in the purchase-order total. The selection replaces a lower standard cargo ceiling for proven direct payload loss but neither concedes loss nor covers every asserted schedule consequence.

Emergency handling that reasonably protects the shipment may be invoiced with documentation. Granite Heron should obtain authorization first when delay will not increase risk. Unapproved action remains compensable only to the extent the agreement permits and the expense was reasonable.

Invoices must reference RC-240912-087, shipment GHL-ASH-091224-087, the purchase order, and the September 12 service date. Blue Ember's payment of an undisputed transportation charge does not waive an environmental claim discovered through the logger. Granite Heron may collect any accepted amount notwithstanding a separate good-faith cargo dispute.

Incorporated custody and claim terms

Master Logistics Services Agreement BE-GHL-MLS-2023-1101 supplies the general contract rules. Quality Agreement QA-BE-GHL-017 controls training, monitoring, deviation, data, and disposition cooperation. Statement of Work SOW-BE214-VAL-04 defines the program service, and Release Specification BE214-RS-03, Revision 3, defines the environmental criterion.

No standard bill-of-lading language changes those negotiated writings unless Blue Ember and Granite Heron sign a conspicuous amendment. A delivery signature records receipt, not scientific release. Granite Heron does not make a regulatory decision, and Blue Ember does not operate the carrier's refrigeration system.

If an event occurs, both companies will take reasonable steps to protect material and reduce loss. An alternative must be assessed using its capability, timing, expected benefit, cost, and quality risk. No clause requires release of unsafe material or permits avoidable delay after a commercially reasonable option becomes available.

Claims remain subject to proof of duty, breach, causation, foreseeability, reasonable certainty, contractual limitation, and mitigation. The rate confirmation is not a liquidated-damages schedule. Participation in an investigation does not admit liability, and a reservation of rights does not justify withholding agreed technical records.

Confirmation and later record use

Granite Heron issued this route confirmation on September 11, 2024 after reviewing the accepted shipment instructions. Adrian Locke authorized the commercial commitment. Tess Holloway received the operational assignment for the Fletcher facility. Blue Ember, through Dr. Mira Solis, confirmed the appointment and incorporated purchase order on the same date.

Granite Heron Logistics, Inc.

Adrian Locke, Vice President, Controlled Transportation

Issued September 11, 2024

Operational acknowledgment

Tess Holloway, Transport Operations Manager

Received September 11, 2024

Blue Ember Biologics, LLC

Dr. Mira Solis, Chief Operating Officer

Accepted September 11, 2024

The actual custody event occurred the following day. This confirmation does not purport to be a post-event reconstruction and does not include findings about the later logger curve. Granite Heron attached the document to its answer filed December 30, 2024. That litigation filing date does not replace the September 11 issue and acceptance date.

All contact numbers, signatures, facility names, equipment identifiers, and business details in this training record are fictional and should not be used for operational service.
