

**SYNTHETIC TRAINING RECORD — FICTIONAL PARTIES, PEOPLE,
PLACES, IDENTIFIERS, AND EVENTS — NOT A REAL FILING**

Certified Docket and Record Certificate

Filed January 13, 2026

United States District Court for the Western District of North Carolina Blue Ember Biologics, LLC v. Granite Heron Logistics, Inc. Civil Action No. SYN-WDNC-24-CV-0520

I, Avery Thorn, fictional clerk for the exercise court, certify the district docket and lower record assembled after Blue Ember's January 12 notice of appeal. The certified set contains forty-two distinct documents and 430 consecutively numbered lower-record pages. Each item retains its original title, filing or event date, actor, and source relationship.

The complaint began the action on December 2, 2024. Granite Heron answered December 30. Discovery, pretrial proceedings, the six-day jury trial, special verdict, original judgment, timely posttrial motion, December 15 order and amended judgment, and notice of appeal appear in chronological docket order.

The certificate establishes record identity and completeness for transmission. It does not decide preservation, reweigh evidence, alter the amount of either judgment, or add a filing that did not occur. The portable documents are searchable presentations of the synthetic sources and contain no non-document media.

Pleadings, agreements, and discovery record

The first seven documents comprise the complaint and answer followed by five integrated transaction instruments. Those instruments are the Master Logistics Services Agreement; the shipment-specific BE-214 Cold-Chain Statement of Work; the Quality Agreement and Temperature-Control Protocol; the Validation-Lot Purchase Order and Release Specification; and the Shipment Rate Confirmation and Custody Terms. Their underlying transaction dates remain those printed in the instruments despite later attachment to pleadings.

The discovery record continues with Rule 26 disclosures filed February 28, 2025; Blue Ember's organizational deposition dated April 7; Granite Heron's organizational deposition dated April 21; Tess Holloway's May 5 operations deposition; and Dr. Nia Calder's May 19 capacity deposition. Kellan Brooks's expert report is dated July 7 and Dr. Elodie Park's report August 4.

The clerk verified that document identifiers, lot BE214-VL-2409A, monitor CTX9-44721, tractor GH-4821, trailer TR-7714, facilities, and event times remain consistent across those materials. This administrative verification identifies correspondence; it is not a finding about disputed facts or expert weight.

Pretrial and trial transcript entries

The Final Pretrial Order was entered September 12, 2025. The Joint Stipulated Facts and Contested Issues followed September 19, proposed instructions and objections September 26, and the Final Pretrial Conference Order with witness and exhibit lists October 3.

Trial began October 6. The six transcript documents cover openings and contract proof; the October 7 temperature-excursion and causation evidence; the October 8 Cobalt Finch and mitigation evidence; October 9 damages experts; October 10 defense evidence; and October 14 rebuttal, charge, and closing. The transcript sequence accounts for the weekend and the excluded October 13 sitting date.

Each transcript is distinct from the admitted documentary exhibits and later motion summaries. Reporter certifications identify corrections without rewriting substantive testimony. The certified record preserves the parties' actual presentations, including Granite Heron's causation-only Rule 50(a) arguments and the Court's instructions assigning mitigation separately.

Trial exhibits and pre-verdict motions

Seven exhibit documents were admitted during October 7–10: the shipment logger and custody collection, stability assay and lot disposition, replacement schedule and ledger, Cobalt Finch offer emails, qualification and change-control file, Blue Ember damages schedule, and Granite Heron mitigation model. Their dates reflect admission in the synthetic trial rather than the underlying business event date.

Granite Heron filed its initial Rule 50(a) motion October 10 and its close-of-all-evidence renewal October 14. Both documents specify causation only. Neither asks the Court to direct a mitigation amount, and each leaves Cobalt Finch reasonableness and net deduction for the jury.

The special verdict returned October 14. It found 4.2 million dollars in gross damages and a 300,000-dollar net mitigation deduction, resulting in 3.9 million dollars. These numbers are indexed separately from the later judicial amendment so users can identify which decision maker supplied each amount.

Judgment and posttrial entries

The Court entered the original 3.9-million-dollar judgment on October 15, 2025. Granite Heron filed its combined Rule 50(b) and Rule 59 motion November 10, identifying mitigation as a JMOL ground for the first time after verdict and requesting a 1.5-million-dollar deduction. Blue Ember opposed November 24, and Granite Heron replied December 1.

Judge Carver heard argument December 8. On December 15, the Court granted renewed judgment, conditionally granted a new trial limited to gross damages and mitigation, and entered an amended judgment for 2.7 million dollars. The record retains both judgments and the conditional ruling's stated effect if JMOL is vacated or reversed.

Blue Ember filed its notice of appeal January 12, 2026. The posttrial motion had restarted the civil appeal period when disposed of, and the docket records the notice after that disposition. This certificate followed January 13 and makes no appellate merits determination.

Record assembly and integrity checks

The certified set contains 430 lower-record pages allocated exactly across the forty-two docket documents. The clerk checked that every document begins with the common synthetic-record notice, uses the expected internal breaks, and ends without an unexplained missing leaf. Titles and dates match the docket index.

Source relationships for the monitor report, assay summary, invoices, schedules, and email chain remain stated within their exhibits. A readable rendering does not replace retained source data or imply that the application interpreted device, laboratory, or manufacturing results. No audio or video item is included.

The actual record contains the two causation-only pre-verdict motions, the postverdict mitigation request, the 4.2-million-dollar gross verdict, the jury's 300,000-dollar deduction, the 3.9-million-dollar original judgment, the Court's 1.5-million-dollar deduction, and the 2.7-million-dollar amended judgment. The clerk found no assumed substitute motion within the certified district materials.

Certification and transmission direction

I certify that the foregoing index and assembled documents accurately represent the synthetic district record designated for the appeal. Corrections are limited to openly identified clerical or typographical matters; none changes a timestamp, amount, motion ground, verdict answer, or judicial disposition. The original source files remain retained under the exercise record policy.

Counsel received notice of the certified assembly and could identify an omission or mismatch before transmission. No party requested addition of a document outside the actual proceedings. Any later supplemental record must be separately authorized and cannot be inserted silently into this set.

The clerk directs transmission through the fictional appellate filing process after completion of ordinary docketing steps. This certificate authenticates an exercise record only. All parties, lawyers, court personnel, facilities, scientific materials, vehicles, addresses, sums, and events are invented, and no real legal obligation or adjudication is represented.
