

**SYNTHETIC TRAINING RECORD — FICTIONAL PARTIES, PEOPLE,
AGENCIES, SYSTEMS, IDENTIFIERS, AND EVENTS — NOT A REAL
FILING OR CYBERSECURITY GUIDE**

Sealed Joint Appendix Excerpts and Index

Filed: May 4, 2026 **Synthetic docket:** SYN-CA4-26-CV-4106 **Controlled status:** Fictional semantic-placement counterpart; no authentic operational information

Controlled Index and Scope

This short controlled volume identifies semantic positions in selected lower-court materials. It is not an operational appendix and does not alter the certified record. Condition-Aster, Sequence-Beryl, Value-Cinder, Role-Dovetail, Safety-Echo, and Channel-Fable are invented labels with no meaning outside this exercise.

The selected sequence covers the request, acknowledgment, clarification, initial release, administrative appeal, final administrative decision, search certification, Vaughn materials, supplemental release, cross-motions, relevant orders, judgment, docket certification, and transmittal. The equal-page public volume supplies ordinary legal and factual context without resolving the inert labels.

The fixed universe is twelve records comprising 200 source pages: sixty decision-tree pages, fifty-four escalation-matrix pages, sixty-four coordination-appendix pages, and twenty-two governance pages. No excerpt contains a real system detail, actionable instruction, authentic communication path, credential, incident, or personal locator. The controlled vocabulary permits comparison of placement only. Every referenced item remains subject to the same fictional access grant, closure verification, and revocation conditions.

Limited Treatment and Session Boundary

The public counterpart remains available without controlled access. This volume is one of four individually identified controlled appellate filings under the Local Rule 25(c) motion and interim order. Its treatment does not extend to public briefs, docket metadata, oral-argument notices, or judicial decisions.

Eligibility is limited to Presiding Judge Vale, Judge Quill, Judge Reed, necessary chambers and Clerk's Office staff, and counsel of record Tamsin Roe, Leo Marr, and Corin Pell. Inclusion on that list is not permanent permission. Each viewing grant must identify this document and the exact resolved-pack closure.

Before a leased snapshot appears, the authored policy requires verification of the controlled path, size, digest, readability, and six-page count from the designated content-addressed store. Revocation removes the controlled row and returns the viewer to the public-only projection. The description defines the exercise's access contract; it makes no claim that an outside product or court system presently supplies such implementation.

Administrative and Search Placements

The request chain fixes DOE-FOIA-2024-OG-041, ACK-OG-0610, CLR-OG-0621, RLS-OG-001, DOE-APR-2024-OG-017, and FAD-OG-1007. The clarified scope excluded authentic technical and personal matter. None of the inert labels expands that scope or supplies omitted content.

SRCH-OG-2025-0804 moves from 16,842 raw hits through 1,284 deduplicated candidates and forty-six custodian-reviewed files to twelve responsive records with 200 pages. The controlled sample shows Condition-Aster near a decision position, Sequence-Beryl near an ordering position, and Value-Cinder near an escalation position. Their placement is abstract and nonfunctional.

Disposition remains three records and fifty-four pages withheld in full, seven records and 124 pages partly produced, and two records and twenty-two pages fully released. DOE produced 146 images, sixty-eight without blackout and seventy-eight redacted. Of the redacted images, sixty-two cite 7(E), fifty-one cite 7(F), and thirty-five cite both; every fully withheld page cites 7(E), with thirty-nine also citing 7(F).

Vaughn and Supplement Placements

The controlled Vaughn excerpts position Role-Dovetail, Safety-Echo, and Channel-Fable beside the passages for which DOE asserted duty, safety, or coordination functions. They identify no person, dependency, communication route, or actual protective activity. DOE relies on the declarations for the legal connection; Open Grid contends that several categories remain too broad.

Other excerpts position Condition-Aster, Sequence-Beryl, and Value-Cinder within the operational decision-tree discussion. Open Grid accepts protection for sufficiently explained nonpublic trigger, order, escalation, and implementation relations. It disputes whether all neighboring administration shares that function.

RLS-OG-002 restored seventeen passages across eleven replacement pages without changing the responsive records or source-page count. Six pages received two restored passages and five received one. The controlled placements remained inert while the public copies gained ordinary context. The parties offer different conclusions from that correction, but neither treats these labels as the underlying withheld information.

Litigation Placements and Rulings

The selected motion excerpts show Open Grid challenging categorical 7(F), segregability, and broad judicial restriction while conceding a supported 7(E) operational core. DOE's selected excerpts defend the current categories and request, at minimum, an opportunity to provide further explanation before any disclosure order.

The district court sustained the agency's 7(E) and 7(F) claims, accepted its updated segregability conclusion, and maintained broad restrictions over judicial materials. It entered final judgment for DOE on January 2, 2026. The record was certified and transmitted under the actual synthetic appellate docket.

The controlled labels appear only where semantic placement assists the panel's review. They cannot prove an exemption by themselves and do not supply a new agency rationale. Their purpose is to let the Court determine whether the declarations correspond to the passages described, while the public counterpart preserves the legal arguments and record arithmetic for ordinary access.

Joint Controlled Certification

The parties certify that this volume corresponds by subject to the public appendix excerpts and contains independently composed prose. It presents only selected material; the complete certified record remains controlling. No label or placement changes the agency request, search, disposition, or supplemental-release totals.

The six inert labels are the only controlled vocabulary used. They do not encode a condition, order, value, identity, safety dependency, route, chronology, or implementation detail. No reader can use them to reconstruct a real protective process because every underlying entity and event is fictional and no actionable content is included.

Tamsin Roe, Leo Marr, and Corin Pell certify service through the synthetic docket on May 4, 2026. The public counterpart remains accessible. Viewing this volume requires a document-specific, revocable session tied to the exact resolved closure; revocation restores the public-only view. Access to this volume supplies no entitlement to a controlled brief or later filing.
