Never-Filed Counterfactual Certificate of Confidentiality

Court: United States Court of Appeals for the Fourth Circuit **Case:** Open Grid Archive v. United States Department of Energy **Isolated docket:** SYN-CA4-26-CV-4106-CF-NEVER-OCCURRED

Filed: February 12, 2026

Corin Pell certifies that the controlled materials proposed for this isolated appeal are limited to the sealed counterparts of the counterfactual opening, response, and reply briefs and, conditionally, one joint supplemental brief pair if the Court later orders joint briefing on the same controlled subjects. Each counterpart uses arbitrary exercise labels in place of purportedly sensitive field values. The labels are not real confidential information, yet access is treated as controlled so the record can test document-specific sealing behavior.

The asserted basis is the corrected premise concerning narrow 7(E) implementation relationships and limited 7(F) human-function fields. The certificate does not broaden those categories. It does not designate public legal argument, authorities, chronology, arithmetic, document titles, or general administrative text as confidential.

Every controlled filing must arrive with the public redacted counterpart identified in the motion for limited sealing. Equal page count and semantic alignment are mandatory. Independent phrasing prevents the controlled text from being reconstructed through repeated public prose.

This certificate is informational and creates no access right. A disclosure-specific court authorization and a valid session event remain necessary before any controlled asset may be opened.

Materials and Counterparts

The fourteen-page opening pair addresses jurisdiction, the corrected premise, 7(E), limited 7(F), Vaughn specificity, segregability, sealing, and requested relief. Its eighth semantic subject concerns the limited 7(F) showing. The public side uses conspicuous field notices; the sealed side uses inert category labels.

The fourteen-page response pair addresses the same four targets from DOE's perspective. Its seventh subject documents the corrected line-by-line review, including released administrative material and the reasons for retaining defined relationships. The public and controlled copies remain usable separately.

The eight-page reply pair narrows the disputed points after the response. Its fourth subject analyzes document-specific sealing and the public-only default. The controlled side illustrates the field categories without changing the legal analysis disclosed publicly.

One later joint supplemental pair may use this certificate only if a court order first requires that joint briefing, the pair addresses the same controlled field subjects, its equal-page public counterpart is filed, and a disclosure-specific judicial grant identifies its exact resolved closure. The condition does not assume that such briefing will be ordered or filed.

No other never-filed document is certified for sealing. The premise notice, motion, this certificate, argument notice, opinions, judgments, and unmatched later papers remain public exercise records. A filing cannot inherit the certificate merely by discussing the same subject; it must satisfy its own disclosure definition and supporting requirements.

Eligible Participants and Verification

Judges Vale, Quill, and Reed and assigned fictional court staff are eligible for judicial access within an authorized session. Tamsin Roe and Leo Marr are eligible as counsel for Open Grid. Corin Pell is eligible as counsel for DOE. Eligibility ends with the participant's role and does not establish permanent possession.

The access service must match the requested disclosure, participant, session, and resolved pack closure. Before an authorized open, content-addressed storage verifies the controlled path, byte count, SHA-256 digest, readability, and planned page count. A mismatch prevents exposure. Successful verification permits only a leased session snapshot.

Stable logical subjects resolve to public pages before a grant and to the authorized controlled counterparts after verification. They do not reveal a sealed physical locator to a public viewer. Authorization for one brief cannot be reused for another pair, and a pack revision requires a grant tied to the newly resolved closure.

Revocation deletes the sealed row from the session projection. Subsequent resolution returns only the public counterpart. Audit events may record that access was granted or denied, but a public response must not include controlled bytes, location, digest, size, or page identity.

Duration and Attestation

The requested confidentiality period ends thirty days after the appellate mandate unless the Court orders earlier release or enters fresh findings supporting a different period. Counsel must report a material change that weakens the asserted need. Expiration requires review rather than automatic migration of a controlled asset into the public projection.

The six inert labels permitted in sealed briefs are Condition-Aster, Sequence-Beryl, Value-Cinder, Role-Dovetail, Safety-Echo, and Channel-Fable. They denote types only. They encode no value, priority, interval, destination, person, system property, or course of action. Public copies instead use descriptive redaction notices naming the fictional category.

I reviewed the limited-sealing motion and the anticipated paired filings for consistency with this certificate. I have not listed a real individual, facility, contact method, credential, or cyber-response instruction. I understand that a certificate without a public counterpart and a court-approved session grant is insufficient for access.

I certify these statements within the counterfactual exercise on February 12, 2026. This certificate was never filed on the actual docket and has no effect outside the isolated training branch.

Corin Pell Fictional Counsel for DOE
