AGENCIES, SYSTEMS, IDENTIFIERS, AND EVENTS — NOT A REAL
FILING OR CYBERSECURITY GUIDE**

Public Redacted In-Camera Review Declaration

Filed: November 12, 2025 **Synthetic docket:** SYN-DMD-25-CV-0914 **Declarant:** Elian Voss, fictional DOE FOIA officer

I declare under penalty of perjury within this synthetic exercise that I coordinated the preparation of materials tendered for the Court’s in-camera review. I reviewed the public and controlled Vaughn indexes, sample playbooks, highlighted memoranda, and the chart accompanying DOE’s motion to maintain sealing.

The controlled terms have no genuine operational content. Public copies substitute [REDACTED—FICTIONAL DECISION CONDITION], [REDACTED—FICTIONAL RESPONSE ORDER], [REDACTED—FICTIONAL ESCALATION VALUE], [REDACTED—FICTIONAL DUTY ROLE], [REDACTED—FICTIONAL SAFETY REFERENCE], and [REDACTED—FICTIONAL CONTACT CHANNEL] at corresponding semantic positions.

My purpose is to explain how the agency grouped the asserted fields and reviewed nearby text. I do not authenticate a real program, employee, system, incident, or technique. The original request excluded live technical and personal information, and this litigation model contains none.

The six divisions of this declaration correspond by subject to a controlled counterpart. They are independently written. Public access to this document neither reveals nor authorizes access to the controlled version.

Materials and Review Method

I began with the fixed twelve-record, 200-page responsive universe. I considered the three fully withheld playbooks, seven partially released playbooks, two fully released governance records, and the public explanations of each disposition. I also reviewed the later seventeen passages disclosed on eleven replacement images.

For each disputed segment, the team recorded the document family, the asserted field type, the invoked exemption, and whether surrounding language remained intelligible. The worksheet distinguished [REDACTED—FICTIONAL DECISION CONDITION], [REDACTED—FICTIONAL RESPONSE ORDER], [REDACTED—FICTIONAL ESCALATION VALUE], [REDACTED—FICTIONAL DUTY ROLE], [REDACTED—FICTIONAL SAFETY REFERENCE], and [REDACTED—FICTIONAL CONTACT CHANNEL]. Reviewers asked whether a heading exposed a relation and whether neutral administration survived removal.

We used public notices rather than values in the open worksheet. The notices disclose the semantic type only. They contain no ranking, identity, or relation that a reader could implement. The controlled worksheet uses arbitrary labels to permit the Court to see corresponding positions.

The process was intended to support both exemption and segregation review. A determination that one field was protected did not formally decide every sentence on its page. Where reviewers found a coherent administrative passage, it was marked for release or included in a public sample.

Categorical Human-Safety Assertion

DOE grouped certain duty, safety, and communication fields under Exemption 7(F). In public form, those fields appear as [REDACTED—FICTIONAL DUTY ROLE], [REDACTED—FICTIONAL SAFETY REFERENCE], and [REDACTED—FICTIONAL CONTACT CHANNEL]. The asserted common function is support for people involved in a fictional protective response.

DOE's category-level prediction is that revealing authentic relationships among those fields could facilitate interference with protective functions and thereby create a reasonable danger to individuals. The agency does not identify a threatened person and does not provide a distinct causal narrative for each use of a field.

The category was applied across decision-tree, escalation-matrix, and coordination-appendix records. Reviewers were instructed to release neutral administration when it could be detached. They retained the asserted human-function relationship and context they believed would reveal it.

Open Grid disputes whether this account sufficiently distinguishes archival roles from protective roles or ordinary distribution from safety-sensitive coordination. My declaration records DOE's final categorical position. It does not add an incident, threat assessment, or example beyond the abstract functional claim.

7(E) and Contextual Placement

DOE used Exemption 7(E) for relationships involving [REDACTED—FICTIONAL DECISION CONDITION] and [REDACTED—FICTIONAL RESPONSE ORDER], and for guideline fields shown as [REDACTED—FICTIONAL ESCALATION VALUE]. The technique-and-procedure claim concerns implementation organization; the guideline claim also includes a predicted risk of circumvention.

Reviewers considered placement because a heading or cross-reference can sometimes reveal how two protected types relate. They released headings and administrative language when they concluded the context did not disclose that arrangement. The completely withheld records were retained after reviewers stated that organization permeated their pages.

The public samples show field locations without any actual condition, order, or value. They are not operational diagrams. No relationship in a public twin can be translated into an action or used to anticipate a real decision.

I understand Open Grid to accept protection for adequately established implementation details while disputing the treatment of surrounding text. The in-camera set was prepared so the Court can evaluate that boundary without exposing more than the approved notices publicly.

Segregability and Supplemental Results

The supplemental team reused preserved exports and did not identify another responsive record. It reassessed passages within the existing production and released seventeen on eleven images. Six images gained two passages apiece and five gained one. The released material included administrative ownership, neutral headings, approval status, revision history, archival instructions, and general coordination statements.

After those releases, reviewers concluded that remaining withheld text either expressed a protected relationship, revealed that relationship through context, or lacked useful meaning when separated. The conclusion was recorded primarily at the field and record-family level. The worksheets did not provide a public narrative for every retained sentence.

DOE regards the correction as evidence of a careful final process. Open Grid regards it as proof that general assurances require more support. Both positions can be evaluated against the paired samples and controlled worksheet.

I certify the arithmetic but do not state that a second release changed the source universe. The responsive total remains twelve records and 200 pages, and the three wholly withheld records remain the same. The issue is judgment within those records, not completeness of the search.

Access Request and Declaration

DOE requests that the controlled materials remain restricted through final resolution and any appeal, subject to further order. Public versions exist for each controlled item. I understand that the Court must consider notice, the asserted interest, less restrictive alternatives, and duration before maintaining closure.

The common asserted interest is protection of the category relationships presented in camera. DOE selected paired filing instead of closing the full summary-judgment record. It did not provide a different necessity analysis for each document, relying instead on the category descriptions and the sealed-materials chart.

I declare that the public counterpart contains the information needed to identify the dispute and that it uses only the approved notices. I do not claim that the existence of a counterpart itself proves sealing is narrowly tailored. That determination belongs to the Court.

I am Elian Voss, a fictional exercise officer. I signed this declaration on November 12, 2025. Its statements are true within the synthetic record and describe no real cyber program or government practice.
