

Officer Priya Vega Supplemental Report

Agency: Alder Creek Police Department **Related event:** ACPD-2025-0203-194211-WC

Author: Officer Priya Vega, unit 236 **Event date:** February 3, 2025 **Supplement completed:** February 4, 2025 **Civil exhibit lodged:** November 21, 2025

This fictional supplement describes Vega's position, observations, and assistance during the welfare check involving Mara Ellison. It is deliberately separate from Officer Nolan Rusk's report because Vega did not share his exact line of sight during the critical physical contact. Her recording and testimony do not reliably resolve Ellison's hand position from 19:53:08 through 19:53:22.

Dispatcher Lena Cho assigned me at approximately 19:47:36. The mobile narrative stated that Iris Ellison sought a welfare check concerning medication or a mental-health crisis. It reported no known weapon, no assault, and no crime. I arrived at Larkspur Court shortly after Rusk and saw Iris in the lot. She pointed toward Building C and repeated that Mara had been upset and needed a calm approach.

I activated or verified my camera before walking toward the breezeway. Rusk was already speaking with Ellison. I heard no pre-contact threat and saw no weapon. At first, Ellison appeared seated near the apartment door with her hands empty.

Position during the initial exchange

I approached from the open end of the breezeway, behind and somewhat left of Rusk. A stair rail, vertical support, and Rusk's body affected my view depending on where each person moved. I stayed several steps back initially so that two officers would not crowd Ellison. From that position I heard discussion about Iris's concern and heard Ellison ask for space.

Ellison appeared distressed. She looked between Rusk and the stair side. I did not see her hold a weapon, make a fist, or threaten anyone before Rusk took her wrist. I also did not hear her agree to medical care. Rusk gave directions concerning her hands and standing or positioning. Their speech began to overlap.

At approximately 19:53:02, Rusk grasped Ellison's left wrist. Ellison pulled or turned, and the distance between them closed. I started moving forward to assist. My view of one hand was blocked first by Rusk's torso and then by the rail and combined body positions. I could tell there was physical movement, but I could not continuously see the direction of each arm.

I heard Rusk say "stop pulling" and Ellison say "you're hurting me." Those phrases were intelligible. They did not tell me whether a later arm contact was a strike, a recoil, or incidental contact during rotation. I did not personally see a clear punch.

Critical visual limitation

Between approximately 19:53:08 and 19:53:22, I did not have a reliable view of Ellison's hands. Rusk stood between part of my sightline and Ellison. The breezeway rail and support narrowed the remaining angle. My camera, mounted on my torso, captured a view different from my eyes, but neither view showed me an uninterrupted hand sequence.

I saw upper-body motion and heard commands, fabric movement, foot contact, and Ellison's voice. I cannot state from personal observation that Ellison struck Rusk's forearm. I also cannot state that she did not make contact with it. I did not see a hand clearly touch Rusk's duty belt or a specific tool. I cannot exclude a brief movement near that area because it was hidden.

Rusk later reported a forearm strike and belt reach. Ellison later said she recoiled from a painful wrist hold and never struck or reached. My observations do not decide between those accounts. I did not report seeing a weapon brought by Ellison, and no weapon was recovered.

I moved closer when the physical contact intensified. I heard an energy-device sound and Ellison cry out. I understood that Rusk was using the device at close range, but I did not see the contact placement continuously. The device log and Rusk's recording provide the timing of one cycle; they do not reveal the obscured hands.

Assistance after the view cleared

At about 19:53:22, the bodies shifted and my view improved. Ellison was moving down or was already substantially down in the breezeway. Rusk maintained control on one side. I moved to the other side and directed Ellison to give me her hand. I obtained hand control and assisted in bringing both wrists behind her.

The handcuffs were secured around 19:53:37. I checked that Ellison was breathing and able to answer. She complained that the restraint hurt and said her shoulder and wrist were painful. She also complained of burning where the device had contacted her. Once control was established, we reduced the number of simultaneous instructions and explained that medical personnel were coming.

I did not deploy my own conducted-energy weapon, strike Ellison, or apply a second cycle. I did not see Rusk deliver another cycle after she was down. I saw no weapon on Ellison. Her phone and keys remained near the doorway and were later gathered with her property.

I spoke briefly with Iris away from the immediate contact area. Iris was upset and asked why electronic force had been used. I told her a supervisor and medical team would respond and did not give a conclusion about the hidden movement. I did not ask Iris to endorse either officer's account.

The scene remained a welfare and medical event, not an arrest scene.

Medical handoff and evidence steps

Paramedic Mateo Cole arrived with the medical team. I relayed that one close-contact cycle had been reported and that Ellison complained of wrist, shoulder, and skin pain. Cole performed the assessment. I did not diagnose injury. I observed a wrist abrasion and two small contact areas but could not determine their eventual clinical characterization.

Ellison was transported to Alder Creek Regional Medical Center. She was not taken to a booking facility, and I prepared no criminal charge. I advised dispatch when the restraints were secure and when medical personnel assumed care. Lieutenant Marcus Hale was notified for administrative review.

I uploaded my body-camera recording through the department's evidence application. The upload retained the device file name and system metadata. I did not trim, enhance, annotate, or synchronize the recording. Sergeant Lila Grant later created the certified export used in the civil case. Any synchronized transcript or frame exhibit was prepared separately and should not be attributed to this report.

My original notes used approximate times. For this civil exhibit I reviewed the certified time map, which fixes first contact near 19:52:48, wrist restraint at 19:53:02, critical obstruction from 19:53:08 through 19:53:22, and completed handcuffing at 19:53:37. Those clock entries improve sequence precision without expanding what I could see.

Certification and boundaries of the supplement

I certify that this supplement states my own observations and identifies where I lacked a clear view. I have not adopted Rusk's report as a substitute for what I perceived, nor have I adopted Ellison's later account. I can confirm movement, commands, a cry associated with one reported drive-stun cycle, Ellison's descent, handcuffing, complaints of pain, and medical transport. I cannot reliably confirm the alleged forearm strike or duty-belt reach.

This distinction is important because a camera angle is not omniscient. My device faced the encounter, but Rusk's body, Ellison's position, the rail, and rapid close movement obscured the relevant hands. Audio supplies words and sounds, not a definitive physical interpretation. A later reviewer should not convert my silence on a hidden movement into proof that it occurred or did not occur.

I offer no legal conclusion about the force, immunity, or appellate jurisdiction. Department classifications are administrative tools rather than judicial rulings. The constitutional analysis may require assumed facts different from Rusk's account, while a trial factfinder may assess credibility.

The report was electronically completed within the fictional ACPD system and later reproduced as a synthetic civil exhibit. Every person, agency, address, and event number is invented. The certification authenticates the authored training record only and does not describe a real police response.
