

SYNTHETIC TRAINING RECORD — FICTIONAL PARTIES, PEOPLE, OFFICES, IDENTIFIERS, AND EVENTS — NOT A REAL FILING OR PRESENTENCE REPORT SEALED SYNTHETIC TWIN — FICTIONAL WORKBENCH PROJECTION ONLY; NOT A REAL PSR OR CM/ECF RECORD

Sealed Separate PSR Appendix Volume

United States Court of Appeals for the Fourth Circuit United States v. Mateo Serrano
Appeal No. SYN-CA4-26-CR-4201 Sealed Document 32 Filed June 2, 2026

This six-page protected exercise volume corresponds to the public docket surrogate filed at the same time. It is not an authentic probation document. Its contents use inert labels to model the categories necessary for appellate review while withholding any real personal or investigative information.

The volume is limited to synthetic presentence history, role-analysis categories, calculation categories, objection positions, and sentencing context. It does not include credentials, contact channels, offense instructions, financial routing, or identifiable personal data. Fact-Aster, Role-Beryl, Range-Cinder, History-Dovetail, Position-Echo, and Person-Fable have meaning only inside this fictional record.

Protection follows the district confidentiality rules and the April 1 appellate motion-and-certificate protocol. This member is separate from the ordinary appendix and appears only after a valid grant for this precise disclosure and package closure. Its public twin supplies a complete category index without pretending that a publicly accessible presentence report exists.

Synthetic Report History

The modeled draft was disclosed on January 9, 2026, and the modeled final report is dated February 17. Between them, Probation considered written positions about the role adjustment and maintained an advisory analysis under the 2025 Guidelines Manual. This page records that chronology without copying a real report format.

Fact-Aster denotes the abstract offense-conduct subject. Role-Beryl identifies the alleged relationship between Serrano and one other fictional participant. Range-Cinder marks the offense-level and sentencing-range category. History-Dovetail collects nonidentifying mitigation themes. No label conceals an operational technique or actual source.

The final modeled calculation used offense level 20 and criminal-history category I, producing a range of 33 to 41 months. The disputed three-level adjustment was tied to an asserted supervisory relationship with a person among five participants. These exercise facts provide context only; appellate review of the adjustment has been dismissed without a merits decision.

Stable Protected-Volume Subject

This third page is the protected endpoint corresponding to the public surrogate's stable volume-navigation page. The workbench stores a logical relationship between the two subjects. It does not expose this physical page to a user who lacks the disclosure-specific grant.

An authorized selection still triggers fresh verification of the expected content-addressed object, file type, declared size, digest, readability, and six-page count. The leased snapshot derives only from bytes that pass every check. Authorization for an opening brief or another sealed disclosure cannot be reused for this volume.

Revocation removes this entry from the projection and closes an existing protected view. A later repair after storage failure requires a new successful open; earlier verification is not cached as permission. These controls demonstrate synthetic record isolation and do not claim access to a real court, probation system, PACER, CM/ECF, or counsel repository.

Objection and Position Categories

The modeled objection disputed whether Serrano managed or supervised Alina Pared, one of exactly five criminally responsible participants. Role-Beryl marks that human relationship. The objection did not argue that control over property, assets, or activity alone could satisfy the adjustment.

Probation maintained its position, and the fictional United States supported the adjustment. Position-Echo identifies those competing submissions without reproducing confidential narrative. The district court ultimately overruled the objection and used the adjusted range at the February 24 sentencing.

The appellate court's May 5 order dismissed the enhancement target because it fell within the valid appeal waiver. Therefore this volume preserves the historical record but asks for no appellate finding on the role evidence. If the sentence is later vacated for allocution, the district court may calculate the Guidelines anew at full resentencing; that possibility is not a merits disposition here.

Mitigation and Sentencing Categories

History-Dovetail represents treatment participation, remorse, and lawful-reentry themes contained in the synthetic submissions. Person-Fable marks sustained employment, family support, and invented caregiving circumstances. Position-Echo also identifies Serrano's request for a sentence below the government's proposed placement within Range-Cinder.

Judge Venn reviewed the papers and heard counsel, then imposed 36 months. Serrano was not personally invited to speak. The listed categories are relevant to whether his own words could have produced a lower sentence, but they do not reveal a real person's history or guarantee any outcome.

Fact-Aster supplies only abstract context for offense seriousness, and no actionable description appears. The sealed reply uses the mitigation labels in its prejudice analysis while the public reply uses category tokens. Both filings disclose the legal dispute and requested remedy. An authorized reader gains no permission for another disclosure. This volume adds protected fictional context without making public comprehension depend on its contents.

Protected-Volume Certification

Celia Arden certifies that this six-page member is an inert synthetic twin of the public surrogate and category index. It contains the complete sealed vocabulary—Fact-Aster, Role-Beryl, Range-Cinder, History-Dovetail, Position-Echo, and Person-Fable—and no authentic presentence material.

The corresponding page subjects are boundary and index, report history, stable navigation, objection positions, sentencing context, and certification. The prose differs independently from the public member. Page equality and stable mapping permit controlled review without converting the public file into a redacted PSR.

Transmission occurred through the fictional sealed exercise channel. Each open remains contingent on the exact resolved package, a current disclosure grant, and complete content verification. Revocation restores the six-page public surrogate. A repaired storage object must pass a fresh check before recovery. No real filing account, password, location, personally identifying information, or protected court record is represented.

This certification confirms that no protected label supplies a legal conclusion unavailable in the public filing.
