

**SYNTHETIC TRAINING RECORD — FICTIONAL PARTIES, PEOPLE,
OFFICES, IDENTIFIERS, AND EVENTS — NOT A REAL FILING OR
PRESENTENCE REPORT**

Public Docket Surrogate and Category Index for Sealed Presentence Report Packet

**United States District Court for the Middle District of North Carolina United States v.
Mateo Serrano** Criminal Action No. SYN-MDNC-25-CR-0328 Docket Entry 32 Filed
February 17, 2026

This public document is a docket surrogate and category index. It is not a presentence report, a public-redacted presentence report, or a substitute for the confidential packet prepared by fictional Probation Officer Niko Faye. It contains no private history, investigative source, personal identifier, or undisclosed sentencing fact.

The sealed synthetic twin is maintained as sealed volume PSR-SV-1 under the rules governing presentence material. Public filing of this index supplies notice that the draft and final reports exist, identifies their general organization, and permits stable page correspondence in the training record. It does not authorize access to the twin.

Each page below describes only a category. Bracketed labels mark nonpublic subjects without summarizing their content. A fictional workbench grant may project the sealed twin for an authorized exercise session, but that projection is not PACER, CM/ECF, Probation, or counsel access. Revocation must restore this public surrogate alone.

Packet Versions and Administrative Dates

The indexed packet contains two versions generated during the ordinary presentence process: a draft disclosed on January 9, 2026, and a final report dated February 17, 2026. This page records only those dates, the version relationship, and the fact that both belong to one confidential packet. It does not disclose revisions, interview material, or the substance of any correction.

The public docket may identify when a report was prepared without making the report itself public. The draft supplied the basis for the objection cycle. The final version reflects the probation officer's disposition of that cycle and remains subject to any unresolved objection presented to the court. The packet chronology is separate from Docket Entry 32, which is merely this index.

The sealed twin uses the same twenty logical page positions so a stable logical anchor can refer to the corresponding subject without exposing a physical sealed page to an unauthorized reader. The public page offers no inference about whether a change favored either party. It confirms only that the February 17 version superseded the January 9 draft for sentencing preparation.

Offense Information Index

This position identifies the report's general offense-information division. Public sources already show that Serrano pleaded guilty to Count One, a synthetic conspiracy to commit wire fraud, and that the charged period ended November 2, 2025. This index does not add nonpublic conduct, witness information, or a description of reimbursement mechanics.

The confidential packet organizes offense material into an overview, a conduct discussion, statutory references, loss and restitution categories, and a participant section. Those headings are listed so the public can understand the packet's structure. They do not reveal a probation conclusion or establish a fact beyond the plea record.

No account number, payment path, communication endpoint, credential, real victim, or investigative method appears here. The underlying exercise concerns fictional Meridian Community Supply Cooperative and an abstract false-claims allegation. A person reading this page should consult the public indictment, plea agreement, factual basis, and Rule 11 transcript for public facts. The existence of a sealed category does not expand those filings or permit reconstruction of confidential material.

[NONPUBLIC PSR CATEGORY—OFFENSE CONDUCT]

This page marks the stable offense-conduct position in the paired packet. The public surrogate deliberately provides category metadata only. It does not reproduce, paraphrase, summarize, or selectively omit the confidential narrative. The heading means that the corresponding sealed position addresses offense conduct in the ordinary report organization.

The public record independently establishes a guilty plea to Count One, the fictional charging period, and the admitted fraudulent object. Those public facts should not be confused with the broader presentence discussion that may evaluate sources, context, or relevant conduct. Nothing on this surrogate page adopts a probation characterization or resolves a disputed sentencing recommendation.

This category position is used for stable logical navigation. An unauthorized projection resolves to this public page. A properly authorized fictional session may resolve the same logical subject to its sealed twin after independent path, size, digest, readability, and page-count verification. That technical exercise rule does not alter the legal confidentiality of a real presentence report and does not imply that members of the public could obtain one.

Conviction and Statutory Framework Index

The corresponding confidential position records the offense of conviction and the statutory framework considered during report preparation. Public Docket Entries 22 through 25 already identify Count One, the plea, and the court's acceptance order. This index points readers to those public sources rather than restating confidential probation analysis.

At a category level, the report distinguishes the offense statute from advisory Guidelines questions. The conviction is for conspiracy to commit wire fraud under 18 U.S.C. §§ 1349 and 1343. The role adjustment remains a sentencing recommendation, not an additional conviction or an element admitted by the guilty plea.

The page also records that sentencing consequences are determined by the court, not by this public index. Any maximum penalty, restitution authority, supervised-release provision, or special assessment must be taken from applicable law and the later public judgment. The index does not supply private information or an undisclosed recommendation. Its purpose is to preserve the paired page's legal subject while making clear that confidential text, if any, remains available only through the separate sealed synthetic twin.

Loss and Restitution Category — [NONPUBLIC PSR CATEGORY—OFFENSE CONDUCT]

This position identifies the loss-and-restitution division of the packet. The public plea documents stipulate a synthetic aggregate amount of \$186,400 concerning fictional Meridian Community Supply Cooperative. This surrogate adds no transaction list, payment history, victim contact, allocation, or collection information.

The paired report position may organize the probation officer's discussion of the stipulated amount and any related recommendation. Public readers are directed to the plea agreement and factual basis for the extent of the stipulation. No inference should be drawn here about a payment schedule, joint responsibility, ability to pay, or a party's private financial circumstances.

Because the exercise is designed around legal procedure, the surrogate intentionally excludes any step-by-step description of false claims or fund movement. It offers only a subject heading and public cross-reference. The later judgment, not the index, will state the court's actual monetary order. The stable page mapping permits an authorized reviewer to move between a public category and the sealed synthetic position without exposing the latter by default.

Participant-Count Category

The confidential packet includes a section concerning the number and identity of criminally responsible participants. Public plea materials identify exactly five fictional participants: Mateo Serrano, Alina Pared, Corin Bell, Darius Venn, and Nessa Holt. This index records that a participant category exists but does not reproduce probation interviews, source assessments, or relationship details.

The five-person numerical predicate and the separate question of managerial authority must remain distinct. Serrano admitted knowing participation and the five-participant count. He did not admit that he managed or supervised Pared. A roster does not itself establish relative authority, direction, control, or responsibility for another person's acts.

No real individual is identified by these synthetic names. The page contains no address, employer, family information, contact detail, account information, or other personal identifier. The corresponding stable mapping permits later protected citation to the subject without disclosing a raw physical pointer to the sealed report. Public readers receive only this categorical explanation.

Role-Analysis Framework

This position identifies the framework used to discuss the disputed aggravating-role recommendation. The advisory question concerns U.S.S.G. § 3B1.1(b) and whether Serrano managed or supervised at least one other criminally responsible person in activity involving exactly five participants. The public index does not reveal a confidential factual analysis.

The plea record preserves competing positions. The fictional United States expects to argue that Serrano's interactions with Pared showed supervision of a person. Serrano expects to describe those interactions as coordination among equals. The sentencing court must resolve the dispute under the governing burden and standard after the parties have an opportunity to respond.

The framework does not use management of property, assets, or activities alone as a substitute for person-management. Nor does this page announce the probation officer's recommendation; that subject is identified at the next paired position. By separating legal framework from confidential application, the surrogate preserves the exact page sequence while avoiding disclosure of report content or premature treatment of a recommendation as a judicial finding.

[NONPUBLIC PSR CATEGORY—ROLE ANALYSIS]

This page marks the stable role-adjustment position. It confirms that the paired confidential page addresses the recommendation under U.S.S.G. § 3B1.1(b), but it does not state the probation officer's reasoning, source material, or ultimate recommendation. The public plea record remains the only source for publicly admitted facts.

The category must not be read as resolving whether Serrano supervised Pared. A presentence recommendation is subject to objection, response, and determination by the sentencing court. The public surrogate neither favors the government's theory nor Serrano's competing account. It preserves neutrality until the issue is litigated in the appropriate proceeding.

For training-record navigation, the same stable logical subject maps to this page in the public projection and to the corresponding sealed synthetic page only during a disclosure-specific authorized session. The mapping keeps the physical sealed identifier out of ordinary public citation. No real presentence access is represented, and no public user should infer that the confidential role analysis is obtainable from a real court system.

Other Adjustments and Acceptance Categories

The paired report contains a section for adjustments other than the disputed role issue and for any recommendation concerning acceptance of responsibility. This surrogate identifies those categories without stating calculations, source facts, or probation conclusions. The plea agreement explains that a favorable acceptance position depends on conduct remaining consistent with the plea.

The public index also records that the role adjustment is evaluated separately from all undisputed calculation steps. That separation allows the court to understand the effect of the disputed three levels without suggesting that every other component is contested. It does not freeze the calculation or bind the court to counsel's estimate.

Readers should not derive a total offense level from this page. The paired total-and-range position appears later in the packet, and any public sentencing finding will appear in a transcript or order. This page contains no confidential detail about interviews, cooperation, obstruction, or another adjustment. It is an administrative guide to report structure, not a report excerpt and not evidence offered by either party.

Criminal-History Category — [NONPUBLIC PSR CATEGORY—PERSONAL HISTORY]

This position identifies the confidential report's criminal-history division. The parties anticipated criminal-history category I during the plea hearing, but the probation office remains responsible for verifying the applicable category. This surrogate states no prior event, score, identifier, disposition, or personal-history detail.

The public category exists because criminal history is ordinarily part of a presentence calculation. Its inclusion does not imply that Serrano has a particular prior record beyond what a later public judicial finding may establish. The synthetic exercise avoids real names, dates of birth, addresses, case numbers, and law-enforcement identifiers.

An authorized reader of the sealed synthetic twin may evaluate the fictional content only within the controlled exercise. A public reader receives this category label and the already public estimate from the plea transcript. If the sentencing court announces a final category in open court, that later public statement will stand on its own. This index does not anticipate, amend, or replace such a finding, and it does not authorize dissemination of the confidential packet.

[NONPUBLIC PSR CATEGORY—GUIDELINE CALCULATION]

This page marks the stable total-offense-level and advisory-range position. It does not publish the confidential report's calculation. The public plea record contains only party estimates: level 20 and 33 to 41 months if the disputed three-level role adjustment applies, or level 17 and 24 to 30 months if it does not, each assuming criminal-history category I.

Those estimates are not a promise or finding. The probation officer may recommend a calculation, the parties may object, and Judge Elara Venn will determine the advisory range before considering the statutory sentencing factors. This surrogate does not reveal which estimate the report adopts or the explanation supporting it.

The heading is a category token, not a redaction in a public copy of the report. Its purpose is to maintain page-for-page correspondence with sealed volume PSR-SV-1 while preventing disclosure by default. Stable logical navigation may reach this surrogate or, after a fictional disclosure grant and independent verification, the paired sealed page. The index itself conveys no private report content.

Statutory and Financial Categories

The paired packet includes categories for the statutory sentencing framework, restitution, the special assessment, supervised release, and the court's consideration of a fine. This public surrogate supplies only that structural index. The public plea agreement already identifies the \$186,400 synthetic restitution stipulation and \$100 assessment.

The index does not reveal Serrano's finances, earning history, dependents, assets, debts, or a recommended payment schedule. Those subjects, if addressed in a confidential report, remain nonpublic. It also does not state a recommended term of imprisonment or supervised release. Only the court may impose those terms in a judgment after sentencing.

No real financial institution, account, property, or creditor appears in this exercise. The category page protects private-detail boundaries while allowing a reader to verify that the report's organization includes legally relevant sentencing consequences. The later public judgment will be the authoritative source for the imposed sentence and monetary obligations, not this index or its sealed twin.

Sentencing-Factor Categories — [NONPUBLIC PSR CATEGORY—SENTENCING POSITION]

This position identifies the packet's organization of information relevant to 18 U.S.C. § 3553(a). Categories may include the nature and circumstances of the offense, Serrano's history and characteristics, the purposes of sentencing, available sentences, the advisory range, consistency, and restitution. The surrogate does not summarize private facts within those categories.

Public filings establish only the abstract offense, plea, five-participant premise, disputed person-management issue, and stipulated amount. Personal history remains protected. A category heading does not indicate what weight the probation officer or court should assign to a consideration and does not recommend a sentence.

The separation between category and content is deliberate. It permits public notice of the packet's structure while avoiding a disguised public report. Counsel may later make public legal arguments that do not expose confidential detail, or use appropriately protected submissions when a private fact is necessary. This index neither expands nor narrows those options. It simply marks the paired page's subject for stable record navigation.

Community and Employment Category — [NONPUBLIC PSR CATEGORY—PERSONAL HISTORY]

The corresponding confidential position addresses categories relating to community and employment history. This surrogate does not identify an employer, address, schedule, colleague, income, volunteer organization, or third party. It confirms only that the presentence packet organizes such personal-history material in the ordinary manner.

The public plea documents contain no admission on these subjects, and this category creates none. A future sentencing memorandum may describe mitigation at a suitably abstract level while protecting private support. The sentencing court may consider lawful information, but public notice of a category does not make confidential source material public.

The exercise uses stable twin mapping so later questions can refer to an agreed logical subject without embedding a physical sealed-page reference. In the public projection, this page remains the destination. A fictional authorized session may expose the inert sealed twin only after verification and only for that disclosure. The design is a workbench control, not a statement about access in an actual probation or court system.

Treatment and Personal-History Category — [NONPUBLIC PSR CATEGORY—PERSONAL HISTORY]

This position identifies a confidential category concerning treatment and personal history. It contains no diagnosis, provider, facility, date of birth, family name, address, or other private fact. The exercise intentionally avoids creating realistic personal records, even within the sealed synthetic twin.

The corresponding packet position may use harmless inert labels to organize mitigation. Those labels carry no real identity and cannot be matched to an outside person. The public surrogate does not imply that a condition exists, that treatment occurred, or that the court should draw a particular sentencing conclusion.

Any party wishing to rely on private mitigation must follow the applicable filing and service rules. This index is not a vehicle for placing that information on the public docket. It also is not a redacted report from which omitted words could be reconstructed. It provides a standalone category description, preserving equal-page topology while maintaining the confidentiality boundary required for presentence material.

[NONPUBLIC PSR CATEGORY—MITIGATION HISTORY]

This page marks the stable mitigation-history position in the paired packet. The public record receives no confidential narrative. At most, later public advocacy may identify broad subjects such as remorse, treatment progress, caregiving, and stable work without naming a private person or reproducing probation material.

The category does not announce a probation recommendation or predict the weight Judge Venn will assign to mitigation. It does not state that any particular fact is verified. It simply identifies the corresponding subject so later protected citations can use one stable logical reference rather than a raw physical location in either twin.

An unauthorized user remains on this public surrogate. A fictional grant for the exact disclosure and exact pack closure may allow the sealed inert twin to be opened after every-open verification. Revocation removes that sealed projection. These controls demonstrate synthetic software behavior only; they do not describe real access rights, real presentence material, or a method for obtaining confidential information.

Recommendation Category — [NONPUBLIC PSR CATEGORY—SENTENCING POSITION]

The confidential packet includes a section for the probation officer's sentencing recommendation. This public index does not state a recommended prison term, supervised-release period, condition, financial schedule, or Guidelines outcome. It merely identifies the section's existence and position.

A recommendation is not binding. Judge Venn must calculate the advisory range, resolve objections, consider the statutory factors, permit counsel to speak, address Serrano personally, and impose a lawful sentence based on the record. Neither the public surrogate nor the sealed report displaces those judicial duties.

The parties may advocate for different sentences in later submissions. Their positions should be taken from those filings, subject to confidentiality limits, rather than inferred from this page. The surrogate also makes no prediction about whether the disputed role adjustment will be sustained. It preserves a neutral category until the court acts and protects the presentence report from becoming public through an overdescriptive index.

Disclosure and Objection History

The packet chronology records draft disclosure on January 9, a defense objection on January 23, a probation position on January 30, a government response on February 6, and issuance of the final report on February 17, 2026. This page lists dates and filing categories only. The associated confidential objection materials are indexed separately and remain sealed.

The sequence gave the parties time to identify and respond to the disputed role recommendation. It does not show how the probation officer evaluated the submissions or whether every factual statement changed between versions. Any unresolved objection remains for the sentencing court.

Service occurred through fictional authorized channels outside public electronic access. The public docket surrogate does not create a download right to the report, objection, position, or response. No motion to seal was required merely to preserve the rule-based confidentiality of presentence material. The chronology documents process without revealing substance and helps distinguish the public index from the sealed report packet.

Public-Surrogate Certification

Tessa Wren, fictional district clerk, certifies that this twenty-page document is the public Docket Entry 32 associated with sealed synthetic volume PSR-SV-1. It identifies categories and administrative dates only. It is not the draft report, final report, an extract, or a public-redacted version of either report.

Each logical position corresponds by subject to one position in the sealed twin. The stable mapping supports the training record's disclosure controls while preventing an ordinary public citation from naming a raw sealed location. Four positions carry named semantic subjects for offense conduct, role analysis, guideline calculation, and mitigation history; all others retain record-unique page subjects.

The clerk further certifies that no real presentence report, person, account, court system, or probation file is represented. Public access remains limited to this surrogate and other ordinary public filings. Any sealed projection exists only within the fictional workbench, requires a disclosure-specific session grant tied to exact pack identity, and ends upon revocation. Filed this 17th day of February, 2026.

Tessa Wren Fictional District Clerk
