

Pre-RIF operations organization

Before March 24, Draven Pike led operations. Naomi Voss supervised four audit managers: Benton, Wynn, Ibarra, and Keene. The managers drew from a common field-auditor pool and all reviewed remediation files.

Benton owned Northline and Oriole transitions and chaired remediation quality. Wynn owned Lantern, Ibarra coordinated western-region travel, and Keene maintained automation scripts. Specialized assignments sat within overlapping manager roles rather than separate departments.

Finance and human resources reported outside this line. Sable Finch supplied the savings target; Mira Solis administered the RIF records.

Post-RIF operations organization

After Benton's termination, Voss supervised Wynn, Ibarra, and Keene. No new audit-manager title replaced Benton. Her work was divided: Wynn received Northline, Ibarra received Oriole, Keene received the remediation-review queue, and Voss chaired the monthly quality meeting.

The chart labels this “manager consolidation.” It does not mark the underlying client or review functions discontinued. Each retained manager continued prior duties while adding part of Benton's portfolio.

The chart labels Benton’s former position eliminated and separately identifies the employees who received each continuing duty.

Headcount and annualized payroll analysis

Before B-7, the covered population contained 23 authorized positions: 21 filled and 2 vacant. B-7 terminated 5 occupants, leaving 16 filled positions, and eliminated both vacancies, leaving 0 vacant positions. Final covered headcount was therefore 16: $23 \text{ total} = 21 \text{ filled} + 2 \text{ vacant}$; $16 \text{ filled} = 21 \text{ filled} - 5 \text{ terminations}$; and $16 \text{ final positions} = 23 \text{ total} - 5 \text{ terminations} - 2 \text{ vacancies}$.

The final model projected \$618,400 in annualized payroll and benefit savings, exceeding the \$612,000 target by \$6,400.

B-7 removed five filled positions: Benton (\$148,000), audit scheduling specialist (\$94,600), controls documentation lead (\$88,800), client onboarding analyst (\$82,400), and vendor coordination specialist (\$76,200). It also removed vacant field-auditor (\$66,400) and project-coordinator (\$62,000) positions. The seven entries total \$618,400.

Version 1 omitted the vendor-coordination specialist and totaled \$542,200 with Benton, \$69,800 short of target. The February 24 revision added that filled position. Manager alternatives could exceed the target only when paired with a separate \$14,600 archive-hosting expense consolidation; operations rejected them on coverage grounds, not because arithmetic made them impossible.

Duty redistribution ledger

The March 25 ledger assigns forty percent of Benton's recorded client hours to Wynn, thirty-five percent to Ibarra, fifteen percent to Keene, and ten percent to Voss. It transfers no hours to a new hire or contractor.

Wynn's added Northline work was scheduled beyond her Lantern transition. Ibarra's Oriole work required six planned travel days. Keene absorbed the quality-review queue while retaining the automation library. Voss approved overtime authority for the first thirty days.

By May 31, the ledger showed all transferred matters active and no position restoration. Actual savings remained near plan, although distribution required more management hours than the March estimate.

Termination and retention register

The register lists Benton’s selection approved March 21 and effective March 24. Reason code RIF-MGT-REDUNDANCY corresponds to the termination letter’s budget and redistribution explanation. The register marks performance action “none” and rehire eligibility “yes.”

Wynn, Ibarra, and Keene are marked retained with exception references for continuity, travel, and automation. Benton’s row links the three downward calibration changes. No row contains a field for employee-relations or EEOC status.

The register records five termination entries, two vacant-position eliminations, sixteen remaining filled positions, and no remaining covered vacancy.
