July 22 Termination/Demand and July 22–25 Cure-Status Chain

Document date: July 22, 2024 Filed: November 3, 2025 Civil Action No. SYN-NDWV-25-CV-0618 Attachment to District ECF No. 43 District ECF No. 43-4

July 22 Notice from Asterglen

To: Copper Kestrel contract operations Copy: Meridian Silt integration delivery Date and time: July 22, 2024, 8:20 a.m. Subject: Immediate termination of BeaconRoute Pilot License and demand

Asterglen has completed its review of activity associated with the twenty-nine X-series environments. Asterglen concludes that Copper Kestrel used or permitted use beyond the twelve-terminal scope and outside the June 10 written load-test conditions. The unsigned June 3 proposal did not authorize that expansion, and Asterglen did not provide production approval on July 8.

Asterglen hereby disables the shared staging credential, terminates the April 15 Pilot License effective immediately, and demands \$480,000 in contract damages. The demand consists of \$348,000 in asserted license and contract value and \$132,000 in response, containment, and forensic-review costs.

This notice supplies zero cure days. Asterglen considers the identified consequences already incurred and does not offer Copper Kestrel an opportunity to avoid termination or the damages demand by reducing the configuration. Copper Kestrel and Meridian Silt must preserve records and cease any new X-series activity.

Asterglen reserves all rights concerning continuing conduct and confidential information.

Copper Kestrel's July 22 Response

From: Copper Kestrel contract operations To: Asterglen contract operations Copy: Meridian Silt integration delivery Date and time: July 22, 2024, 10:02 a.m. Subject: Dispute of immediate termination; request for contractual cure

Copper Kestrel disputes that its monitored evaluation violated the parties' permissions. The June 10 conditions, provisioning decisions, and July 8 discussion allowed continued technical activity under Copper Kestrel's reasonable understanding. No signed expansion existed, but that point does not resolve whether the test work was permitted.

Section 9.2 requires written notice and a fifteen-calendar-day opportunity to cure before termination or breach damages. Your notice declares both consequences immediately and gives no cure interval. Copper Kestrel requests that Asterglen withdraw the immediate effective terms and treat today's communication as the beginning of the contractual period.

Without admitting breach, Copper Kestrel can reduce the active configuration to the twelve licensed terminals within three business days. The proposed completion date is July 25 if administrative access remains available. Meridian Silt can freeze changes, identify active X-series connectors, disable them in controlled groups, and verify the remaining T-series baseline.

Copper Kestrel also disputes the \$480,000 calculation. The proposed change order was unsigned and did not establish a debt. Please preserve access needed for the reduction and identify any additional corrective result you require.

Asterglen's Cure-Status Reply

From: Asterglen contract operations To: Copper Kestrel contract operations Copy: Meridian Silt integration delivery Date and time: July 22, 2024, 12:16 p.m. Subject: Re: request for contractual cure

Asterglen acknowledges Copper Kestrel's request but does not withdraw the termination or damages demand. Asterglen's position remains that reducing future activity would not undo completed use, consumed services, or loss of control over the licensed scope.

Asterglen will not designate the next fifteen calendar days as a cure period. The notice remains immediately effective, and the shared staging credential will not be restored. Asterglen does not grant a new authorization for post-termination platform activity.

Copper Kestrel and Meridian Silt must cease new X-series configuration, traffic groups, and dispatch reliance. Existing logs and configuration files must be retained without alteration. Any work possible from information already held must be limited to preservation, continuity, inventory, mitigation, and session closure.

The \$480,000 demand also remains in effect. Asterglen does not agree that the amount is the price term of the unsigned proposal; it asserts the amount as contract damages to be supported separately.

This response does not accept Copper Kestrel's characterization of the July 8 call or concede that the alleged breach is fully remediable. Communications about closeout are without waiver of Asterglen's stated position.

Three-Business-Day Reduction Plan

From: Copper Kestrel pilot operations To: Asterglen platform operations; Meridian Silt integration delivery Date and time: July 22, 2024, 2:05 p.m. Subject: Proposed controlled reduction ending July 25

Copper Kestrel submits the following plan without admitting that prior activity was unauthorized. Day one, July 23: freeze all X-series changes, compare connector status with the forty-one-item ledger, and identify any current event source. Day two, July 24: disable proposed connectors in verified groups while monitoring the twelve T-series environments for stability. Day three, July 25: complete remaining closures, confirm that the active set is twelve, export final status, and return restricted credentials as directed.

Meridian Silt will perform available configuration steps and document each action. Copper Kestrel will prevent ordinary routing reliance on X-series output during the work. Asterglen is asked to restore the minimum administrative access and monitoring channel needed for complete verification.

The schedule uses three business days after July 22 and is shorter than the fifteen-calendar-day opportunity stated in Section 9.2. If Asterglen identifies an additional corrective task, Copper Kestrel requests written detail and a reasonable method to complete it.

From: Asterglen platform operations Time: 3:11 p.m.

The shared credential remains disabled. Asterglen does not grant new access or approve the proposed sequence as a contractual cure. Preserve records and direct any request through contract operations.

July 23 Status Messages

From: Meridian Silt integration delivery To: Copper Kestrel pilot operations; Asterglen platform operations Date and time: July 23, 2024, 11:40 a.m. Subject: Day-one inventory and freeze status

Meridian Silt has frozen additions using the configuration information and task files already delivered to Copper Kestrel. The inventory reconciles to forty-one provisioned Identifiers: twelve T-series and twenty-nine X-series. We are preserving connector records and have not added any environment.

The X-series group contains different technical states, so any available reduction must use controlled sets rather than an unverified bulk action. We will document prior state, mitigation action, resulting state, and any exception. Current-data inputs have been stopped or isolated pending closure, but shared-credential disablement limits full platform validation.

From: Asterglen platform operations Date and time: July 23, 2024, 1:08 p.m. Subject: Re: day-one status

The inventory count matches Asterglen's record. This confirmation does not restore access, authorize post-termination use, or designate the work as cure. Asterglen continues to require evidence preservation and cessation of new activity.

From: Copper Kestrel contract operations Date and time: July 23, 2024, 4:22 p.m. Subject: Contract status remains disputed

Copper Kestrel is performing the reduction it requested as cure. Asterglen continues to call the work closeout and maintains immediate termination. We preserve our objection that zero cure days violates Section 9.2.

July 24–25 Integration Activity

From: Meridian Silt integration delivery To: Copper Kestrel pilot operations; Asterglen platform operations Date and time: July 24, 2024, 5:18 p.m. Subject: Day-two connector reduction

Meridian Silt used previously delivered configuration files to map sessions, preserve records, support temporary routing, and prepare disputed Identifiers for controlled closure. The twelve T-series environments remained the intended continuing set. Two X-series entries required additional review because their labels differed between Copper Kestrel's files and prior platform displays. No new terminal, test group, or expansion work was added.

From: Meridian Silt integration delivery To: Copper Kestrel pilot operations; Asterglen platform operations Date and time: July 25, 2024, 3:36 p.m. Subject: Day-three mitigation and reduction status

Meridian Silt has completed the inventory, session-protection, continuity, and reduction-assistance steps available without restoration of the shared staging credential. The work supports a technical estimate that a fully coordinated reduction could be completed within three business days, but this message does not certify a platform-wide final active count.

Meridian Silt's work continued through today solely to inventory, preserve, mitigate, close sessions, and assist reduction. We did not treat the work as a new license or initiate additional operational routing. Any question about earlier use remains outside this technical status report.

From: Asterglen platform operations Time: 4:10 p.m.

Asterglen acknowledges receipt of the status information but does not authorize further activity or accept the proposal as a Section 9.2 cure. Contract remedies remain reserved.

July 25 Closing Exchange

From: Copper Kestrel contract operations To: Asterglen contract operations Date and time: July 25, 2024, 4:42 p.m. Subject: Completion of available mitigation and continuing cure request

Copper Kestrel confirms that Meridian Silt worked through July 25 on inventory, mitigation, session closure, continuity, and reduction assistance. The task experience supports our estimate that a coordinated return to twelve terminals is feasible within three business days. We again request the contractually promised cure opportunity and dispute immediate termination and the \$480,000 demand.

From: Asterglen contract operations To: Copper Kestrel contract operations Date and time: July 25, 2024, 5:27 p.m. Subject: Re: completion and continuing objection

Asterglen does not dispute that Meridian Silt performed technical work through July 25. Asterglen does not agree that those activities completed cure, restored the terminated Pilot License, or answered consequences of earlier conduct. The July 22 termination and damages demand remain Asterglen's position.

Chain summary: Asterglen disabled the shared credential and provided zero cure days on July 22; Copper Kestrel invoked Section 9.2 and proposed a three-business-day reduction; Asterglen refused to restore access or create a fifteen-calendar-day cure window; and Meridian Silt continued mitigation and reduction-assistance work through July 25. The participants preserved the three-day feasibility position but did not agree that a contractual cure occurred. They remained divided about oral permission, prior use, contract effect, and damages.

End of July 22–25 correspondence.
